ACKNOWLEDGMENT

Alhamdulillah, praise and thanks to Allah, who is Almighty and gave upon me the greatest rewards, I completed this research in the time given to me. To everyone who gave me the chance to finish this report, I would like to thank you and show my appreciation. First and foremost, I would like to express my gratitude to Ts. Dr. Hasiah Mohamed@Omar, my supervisor, for investing the time necessary to encourage ideas and offer direction in order to finish the report. I would especially like to express my gratitude to my parents, for their continuous backing and support while I finished the project. I would like to express my gratitude to the course lecturer, Madam Ummu Fatimah Binti Bahrin, for providing me with the guidance and explanations I required to complete this project. Finally, as well as most importantly, I would want to thank my friends—especially my closest friend, who is a student in Turkey right now, for their willingness to exchange ideas and to remind me to finish this project report.

ABSTRACT

Dyslexia is a neurological learning situation that affects a person's ability to read, spell, write, and speak. Children with dyslexia frequently suffer from negative emotions including sadness, anger, and low confidence. Thus, it's critical to detect dyslexic children early to provide them proper support that they need. The handwriting style is a simple way to detect the most common dyslexia sign. Many computational and intelligent techniques have been put forward, and they provided a variety of outcomes to assess the recommended system's effectiveness. This project attempts to accurately detect the type of dyslexic handwriting. Convolutional Neural Network (CNN) algorithm was chosen as one of the possible solutions after a thorough analysis of many algorithms for dyslexic handwriting identification. This is because CNN can automatically extract new image data from written material. The CNN model is trained and evaluated on a wide range of handwritten sample datasets. It successfully detects dyslexia-related handwriting type (normal or reversal) with an 90% accuracy rate and high precision 0.93 for Class 1 (Reversal). The dyslexia handwriting detection prototype demonstrates how machine learning may improve the detect handwriting issues in educational settings. A user-friendly desktop prototype was developed, and users may upload handwritten samples and get immediate results for the dyslexia handwriting type (normal or reversal) and status of handwriting (detect or not detect). Further enhancements might involve including machine learning algorithms to improve the prototype's accuracy by learning from a larger dataset, which would eventually improve the prototype's ability to offer deep understanding into handwriting patterns related to dyslexia.

TABLE OF CONTENTS

CONTENT	PAGE
SUPERVISOR APPROVAL.....	i
STUDENT DECLARATION	ii
ACKNOWLEDGMENT	iii
ABSTRACT.....	iv
TABLE OF CONTENTS.....	v
LIST OF FIGURES	ix
LIST OF TABLES.....	xi
LIST OF ABBREVIATIONS	xii
CHAPTER ONE	14
INTRODUCTION	14
1.1 Background of Study	14
1.2 Problem Statement	15
1.2.1 Lack of alternative detection to identify dyslexia handwriting.....	15
1.2.2 Dyslexia detection by experts is time consuming.....	16
1.3 Research Objectives	17
1.4 Research Scope	17
1.4.1 Target user	17
1.4.2 Data	17
1.4.3 Algorithm	17
1.4.4 Image Processing	18
1.5 Research Significance	18
1.6 Research Framework.....	18

1.7 Conclusion	19
CHAPTER TWO	21
LITERATURE REVIEW	21
2.1 Image Processing	21
2.2 Deep Learning.....	22
2.3 Convolutional Neural Network (CNN) Algorithm	23
2.3.1 CNN and How it Works	23
2.3.3 CNN Algorithm Features	27
2.3.4 Advantages of CNN Algorithm.....	27
2.4 Implementation of CNN Algorithm in Various Problem	28
2.4.1 Attention-deficit/hyperactivity disorder (ADHD).....	28
2.4.2 Autism	29
2.4.3 Syndrome Down	30
2.4.4 Hyperactive	30
2.5 Dyslexia Detection	34
2.5.1 Cause of Dyslexia	35
2.5.2 Diagnosis of Dyslexia in Children	36
2.5.3 How Dyslexia Affects Handwriting Skills in Children.....	36
2.5.4 Benefits of early detection of Dyslexia.....	37
2.6 Similar Works.....	38
2.6.1 Fuzzy-C-Means and Rusbossted Tress.....	38
2.6.2 Convolutional Neural Network (CNN).....	38
2.6.3 Support Vector Machine (SVM)	39
2.6.4 Artificial Neural Networks (ANN).....	40
2.7 The Implication of Literature Review.....	44
2.8 Conclusion	44
