**ACKNOWLEDGEMENTS** 

Utmost gratitude is extended to many people for their encouragement; understanding

and assistance in making this study a success.

Deepest appreciation goes to my dedicated and committed Supervisor, Mr. Yuthandy

Maniam for the patience and guidance in helping me to complete this study. Thank you

for sharing your editorial expertise and friendship with me.

Special gratitude to Laday for helping me with the data analysis (SPSS). Admiration

and respect to my loyal and dedicated friends, Hellen, and Mitos to name a few for

sharing understanding moments and experiences, pain and joy throughout completing

this study. You are wonderful.

To the headmaster, Mr. Jeffry Renos Nawie, all the staff and the pupils of SK St

Bernard Sadir, thank you for your cooperation and your fullest support.

Dedication and thanks to my beloved wife and daughters for all the support and

understandings in our family management. To my family members and in-laws, thanks

for your moral and financial support.

Finally, my gratitude to Madam Norseha Unin, Language Coordinator, UiTM for help

to introduce the TESL programme. You had helped me achieve my dream. Without

you, I would not be what I am now. To UiTM, Campus Samarahan, thanks for making

my dream a reality.

Thank you.

### **ABSTRACT**

The purpose of this study was a study to determine whether the teaching of science and mathematics in English help to improve pupils oral communication abilities amongst primary 2 pupils at Sekolah Kebangsaan Sadir, Kuching. The effect and advantages of the implementation and importance of using ICT in English lessons were identified and discussed. In addition to that, the correlation relationship between the implementation of this curriculum and the pupils' oral communication ability was also analysed. Demographical information such as gender, teaching experiences major in colleges and level of classes taught was studied for significant differences between ability to communicate in English. The samples are made up of 43 students: Year 3 as the control group and Year 2 as the experimental groups. The teachers involved with the implementation were the main source of getting data. The findings indicated 76.9% teachers agreed it had help to promote their pupils oral communication ability. Generally, the result indicated a positive relationship between the two variables. Therefore, it can be concluded there is a significance relation prevalent between the teaching of science and mathematics and the pupils' oral communication ability.

### CHAPTER 1

### INTRODUCTION

## 1.1 Introduction

The Malaysian Ministry of Education has taken a bold step in 2003 to implement the teaching of Science and Mathematics in English for Year 1 and Form 1 throughout the nation. This is seen as a significant move in the effort of the Ministry to improve the standard of English among Malaysian learners, which has deteriorating for the past two decades. The implementation is urgent "so that Malaysians can communicate effectively internationally and seek greater advancement in the field of science and technology, particularly in the area of IT" (New Straits Times, 2000) and "to master the English language said the Prime Minister Datuk Seri Dr Mahathir Mohamad" (The Star, 2000). Therefore, the main aim is "to improve English proficiency among students" (Abdul, 2002) and according to Prime Minister and UMNO president, Datuk Seri Dr. Mahathir Mohamad, this will help arrest the declining standards of the language among students and to help them achieve parity with the fast booming economic development and transformation, mastery of English as international language is significant".

This study is conducted to look into the effect of this implementation towards learners' oral communication abilities. The study is focused in a selected Malaysian primary school
