## **ABSTRACT**

This research is an attempt to study the suitability of the surface material used and its function of the surrounding. The idea is to observation about the surfacing material of the site must be taken to support the topic of the research. Observation must be made base on the type of surface material used, the functionality of the pavers and the suitability to the site, and the characteristics of the surface material according to its appearance and function. Other than that, observation on the whole design of the site based on the use of its surfacing material.

From the beginning of the research, it is shows that the use of concrete as the surfacing material are more preferable in Malaysia than any other types of surfacing material. The use of tiles as the surfacing material can bring many problem such as slipperiness and the temperature of the material.

After the observation has been made, it is shows that there are a few types of surface material used at the different part of the whole swimming pool complex. The combination of few types of surface material and their installation patterns can create different yet interesting floor features.

	4.1.2 THE PATTERN OF THE TILES THAT USED AT KOLAM RENANG KUALA KANGSAR	20-22
4.2	QUESTIONNAIRE	23

## ACKNOWLEDGEMENT

First and foremost, I would like to say Alhamdulillah to Allah S.W.T for giving me the strength and health to complete this research paper. Secondly, I would like to acknowledge and extend my heartfelt gratitude to the following persons who have made the completion of this research possible :

1. Mr Zakaria bin Yaacob as the advisor for this vital encouragement and giving guidance, comments and suggestions in relation to the contents of this study and guide the operation of this research.
2. Asso. Prof. Ismail bin Samsuddin as the coordinator of the dissertation who has provided me with significant information on current developments throughout the research and completion of this dissertation.
3. Mr Syukri as the manager in charge at the Kolam Renang Kuala Kangsar .
4. My studio mates, Archirocks Studio for the none ending support, sharing information, and completing this research together.
5. Not forgetting both my parents, Azlan bin Mohd Hashim and Firidah bt. Baharuddin, and my sister Nur Izani for their support, vitality, assistance and cooperation in copleting this research
6. Finally yet importantly, to those who are involved directly or indirectly in providing energy and ideas in completing this study.
