ABSTRACT

Euler's method is one of the most basic and simplest explicit methods to solve first-order ordinary differential equations (ODEs). The simplest approach for estimating initial value issues' solutions is Euler's method. The so-called "enhanced polygon method" or "modified Euler technique," which enables a more accurate approximation of the answer, is another approach that is more helpful in numerical issues. Nowadays, it is vital and efficient to use numerical methods to obtain a rough solution to differential equations. The Euler strategy is the simplest, not just of all the methods, for estimating the solution to the initial value problem. The main objectives are to review the development of Euler's method using bibliometric analysis and to develop a GUI for IVP ODE using Euler's method and some of its variants. The study of solving ODE via Euler's method and its variant is applied to the process of building a GUI function in MATLAB. The literature review for the Euler's method and ODEs was produced in the second step using the bibliometric analysis. The results of solving ODEs using Euler's method and its variant based on GUI-MATLAB are then shown to determine which approach the most effective method based on the Mean Square Error and Computation time that generate from data of GUI-MATLAB on step size 0.1, 0.2, 0.5. The Runge-Kutta order 4 method, the Euler method, ODE23tb, and ODE23s had the lowest MSE and took the least amount of time to solve ODE problems.

ACKNOWLEDGEMENT

In the name of Allah, the Most Gracious, the Most Merciful.

First and foremost, I would like to express my deepest gratitude to Allah, the Almighty, for bestowing upon me the strength, wisdom, and guidance throughout my journey of completing my research. Without His blessings and mercy, none of this would have been possible.

I would like to extend my heartfelt appreciation to my esteemed supervisor, Dr. Nur Idalisa Binti Norddin, for her unwavering support, invaluable guidance, and endless patience. Her dedication to my project, insightful suggestions, and constructive feedback have played a crucial role in shaping my work and enabling me to achieve my goals. I am truly grateful for her mentorship and the knowledge I have gained under her supervision.

I am deeply indebted to my loving family for their unyielding support and encouragement throughout this endeavor. Their unwavering belief in me and their sacrifices have been a constant source of motivation, enabling me to persevere and achieve this milestone in my academic journey.

In conclusion, I offer my sincerest gratitude to Allah, my supervisor Dr Nur Idalisa Binti Norddin, all those who have supported and guided me, and my beloved family for their unwavering support. Their contributions have undoubtedly played an integral role in the successful completion of my Final Year Project. May Allah bless each and every one of them abundantly.
