

**VERIFICATION OF COMPLICATED INTEGRATION
SOLUTION USING FEYNMAN'S AND NUMERICAL METHOD**

NUR IZZAH AQILAH BINTI AMRAM

**Thesis Submitted in Fulfilment of the Requirement for
Bachelor of Science (Hons.) Mathematical Modelling and Analytics
College of Computing, Informatics and Mathematics
Universiti Teknologi Mara**

August 2023

ABSTRACT

Solving integration problems is crucial since they exist in a wide range of subjects and professions such as physics, mathematics, and engineering. There are many complicated integration problems that are usually solved by common theoretical methods such as integration by substitution, integration by parts, and integration by trigonometric substitution. However, these methods need a laborious calculation. As a result, researchers prefer to use numerical methods that are straightforward and easy to apply. In this project, theoretical method namely Feynman' method and numerical method are used to solve complicated integration problems. The percentage of relative error is used to analyse the error. This project tries to verify the solution for the complicated integration problem using Feynman's method by the numerical method particularly the Trapezoidal Rule when direct solver failed to give the solution.

ACKNOWLEDGEMENT

In the name of Allah, Most Gracious, Most Merciful. Praise to be to Allah, for giving me this opportunity and strength to complete this report successfully. First and foremost, I would like to place my gratitude to my supervisors, Dr Mohd Rivaie bin Mohd Ali who provide guidance, patience, management, and valuable advice throughout the process that made this research possible to complete. His help of giving me such a constructive comment, suggestion and ideas have contributed a lot to the success of this research. I also would like to express my sincere thanks to my parents and sibling by giving me mentally supports, needed finance, and encourage me through all these years. To my lecturer and friends, Dr Nurul Ainina Bt Redwan, Adlin Suraya Bt Ramli, Nur Adlin Arifah bt Misni, Nurul Shayiddatul Asma Bt Hassan, and Wan Aina Farzana Bt Wan Asri, thank you for cheering me up and always saying yes to whatever plans I have in mind. From studying at McDonalds late at night till the sunrises, to impromptu picnic at the beach after writing our thesis together. Without them, this thesis would not be as well written as it is right now. Lastly, thanks to others lecturer for their help and encouragement in the Faculty of Computer and Mathematical Science.
