Bachelor of Science (Hons.) Mathematical Modelling and Analytics
College of Computing, Informatics and Mathematics
Universiti Teknologi Mara**

August 2023

ABSTRACT

In mathematics, numerical integration is particularly important. In this project, there are five numerical integration methods involved which come from Closed Newton-Cotes Methods (Trapezoidal Rule, Simpson's 1/3 Rule, Simpson's 3/8 Rule, Boole's Rule) and Alternative Extended Simpson's Rule. The main goal of this research is to evaluate the effectiveness of Closed Newton-Cotes Methods and Alternative Extended Simpson's Rule. Based on error analysis and CPU time, the best method is chosen. The effective method will be determined based on the lowest percentage error and CPU times. The best method in total is determined based on the performance of percentage error. To choose the best method, the programme MATLAB R2022a is used, and the outcomes are compared. SigmaPlot 14.0 software has been included to display the performance profile of each method. In the end, it is emphasised that Simpson's 1/3 is the best method with subinterval of $n = 96$ in term of error analysis. While Alternative Extended Simpson's Rule with subinterval of $n = 12$ is the most effective method based on CPU Times performance.

ACKNOWLEDGEMENT

Alhamdulillah. Most significantly, I want to thank and praise Allah for providing me the strength to complete this study assignment in almost a year with His blessings. I wouldn't have been able to get this far without His blessing. In addition, I would like to express my gratitude to my supervisor, Madam Ruhana Binti Jaafar, without whose supervision my study would not have been completed successfully. Even though I ran into a problem in the beginning of this project, she still gave me guidance. She consistently offers guidance and advice to help me complete my project successfully.

On the other hand, I want to express my appreciation to Dr. Syazwani Binti Mohd Zokri for her guidance on the proposal project and for introducing me to the features of the End Note software in Microsoft Word. Next, I did like to thank Dr. Nur Atikah Binti Salahudin, the coordinator of the final year project, for her guidance in getting this project done successfully. Finally, I would like to extend my sincere thanks to Dr. Mohd Rivaie Bin Mohd Ali for his explanation of performance profiles and teaching me how to create them. Finally, I want to thank my parents for their unfailing support. My determination and strength to complete my project are always provided by their support. Finally, I wanted to express thanks to my fellow students and classmates from CS267 for supporting me with the project and providing information they learned from their supervisors.
