## ACKNOWLEDGEMENT

Praise and thanks be to Allah (swt) first and foremost whose mercy and blessings enabled for me to accomplish this project paper.

My earnest gratitude goes to my advisor, Puan Nor Shahrina Bt Mohd Rafien, for her advices, invaluable comments, constructive criticism, immense patient and relentless guidance throughout the development and eventual completion of this study. Without her continuous support, this study would have been a more difficult journey.

Here, I also wish to express my appreciation to my friends who assist and lend a hand when needed and provide valuable input to improve many elements in this study through their informal suggestions and ideas.

I also like to record unbounded indebtedness and sincere respect to the support, prayers and sacrifices of my beloved mother, Puan \_\_\_\_\_ and my siblings.

Finally and above all, my sincere thanks also go to all those whom I had directly and indirectly involved while in the process of completing this work. In this regard, I deeply appreciate the continued support from everyone who has helped me to finish this report.

4.0 Introduction	29
4.1 Diagnostic checking of multiple linear regressions	29
4.2 Descriptive statistics	31

## **ABSTRACT**

This paper studies the relationship between Inflation rates, export and exchange rate on economic growth in Malaysia during the period from 2010-2017. All the variables seem to have relationship with economic growth. Unit root test and diagnostic test were being used to test whether it is stationery or non-stationery. The analyses are conducted using Multiple Linear Regression to get the results. Inflation rate and export show a positive relationship towards economic growth, but the most perfectly significance is export. The multiple linear regression result show that all independent variables were significant relationship towards dependent relationship since the F-value and P-value were 41.32769 and 0.000000 respectively. The null hypothesis has been rejected because the F-statistic is statistically significant at 1% significance level. Based on the result, export is the most factors that give impact on economic growth.
