ABSTRACT

Background music is always played in some restaurants during their daily operation. This technique is being used to enhanced customer experience and indirectly increase customer spending based on their behaviour. The purpose of this study is to examine the relationship between background music and customer spending behavior. This study is conducted on a restaurant that uses background music in its operations. An online survey is carried out to gather information from 202 respondents to observe and compare customer spending when background music was played. In this study, background music has a strong correlation towards customer spending ($p = 0.55$). This research also benefits the restaurant business in enhancing customer experiences by building satisfaction and improving sales. A better experience will likely allow higher spending on the restaurant and returning customers.

ACKNOWLEDGEMENTS

First and foremost, we would like to thank our research supervisors, Lily Nurainul Ashikin binti Ishak and Jazira binti Anuar @ Mohd Noor. Without assistance and dedicated involvement in every step of the process, this paper would never have been accomplished. We would like to express our gratitude for the support and understanding over the past four months the study was conducted.
