Abstract

The main purpose of this study is to identify the relationship between government expenditure and stock market towards debt in Singapore, Malaysia and Philippines. To conduct the study, annual panel data obtained from year 2000 until 2011 which include 33 balanced panel observations for Malaysia, Singapore, and Philippines. A Hausman Test is used in order to identify a suitable model for this study whether it is random effect model or fixed effect model. Hausman test also can identify the relationship among dependent variable and independent variables. For this study, Random effect model is chosen and regress again to obtain the findings. The results show that government expenditure has a positive relationship towards debt meanwhile stock market shows negative relationship towards debt. Stock market variable is the most significance towards explaining debt but for overall regression, the overall variable is significance to explain dependent variable.

Acknowledgement

In the name of God, the Most Gracious and the Most Merciful, I give thanks for the strengths and His blessings which are always with me in completing this thesis. First and foremost, I would like to thank my supervisor, Dr Ting Siew King for her guidance and supervision in helping me to complete this thesis. I also like to give my thanks to my co-supervisor, Tuan Haji Sheikh Junaidi Sheikh Muhammad for the support and reliable knowledge regarding topics for this thesis. Then, my deepest gratitude goes to my families for endless love, prayers, support and encouragement for always strengthen me through my period until I finished my thesis. Finally, thanks from deep of my heart, I want to give to my friends who always helping me by giving their time in helping in all matter regarding to this study especially to my coursemates. Once again thank you so much.
