AHMAD RAIHAN BIN AZLI

BACHELOR OF INFORMATION TECHNOLOOGY (Hons.)

JANUARY 2014

ACKNOWLEDGEMENT

Alhamdulillah, praise thanks to Allah because of His Almighty and His Utmost blessings, I was able to finish this research within the time duration given. Firstly, my special thanks go to my supervisor, Mohd Noor Hajar Hasrol bin Jono for his invaluable guidance and constant encouragement for each phase of this research project work. He exposed me to the workings of relevant topics through journal paper and always showed great interest in providing timely support and suitable suggestion.

Special thanks also goes to my beloved parents Azli bin Kasiron and for non-stop supporting me in terms of care and love.

Not to forget my Final Year Project course lecturer, Puan Rozianawaty and Puan Diana for motivating me and guide me with suggestions and ideas throughout the entire two semesters of completing this research.

Last but not least, I would like to give my gratitude to my dearest friend Muhammad Hisyam and Zafri, my fellow friend and my other fellow course mates in Department of Information technology that have largely contributed in the completion of this research project. Their constant support and encouragement under all odds has brought me where I am standing right today. Again, thank you very much.

ABSTRACT

A portable application or likewise called versatile applications, it is a term used to portray web applications that run on cell phones. The problem faced by the user is cannot be able to join discussion, must have computers in order to join discussion and hardly or difficult to answer when outside of computer range. This application will help users to access group forum easily and make them easily to answer and join discussion. This application only focuses on group discussion of i-Learn. The users is especially for UiTM students and lecturers. This application being developed using monaca. The methodology that being used in this project was rapid application development (RAD) to provide opportunities to assess the direction of a project throughtout the development lifecycle. The RAD consists of four stages which is requirement planning, user design, construction and cutover. Basically, RAD consists of four stages buit will stop until the construction phase to achieved third objectives. As the result, this application can make users easier to join group discussion forum. By using this application, users need to login first, and then they can pick group, course, and join the discussion. Future works recommended are to include some more gimmicks, for example, intriguing interfaces and a great deal more easy to understand.
