PILOT PLANT RATIO CONTROL SYSTEM BY USING
YEWPAK MARK II SYSTEM.

ABSTRACT

The advance of low-cost and yet powerful process computer system has made it more convenient now to implement advanced process control to improve control of plant performance and hence plant profitability. Advanced process control techniques are much more sophisticated than the simple PID controllers and thus, it is essential that a correct process simulation based on the knowledge of process dynamic can be developed for control operations and also training purposes. This project shows one of the application of the YEWPACK MARK II process computer through a RATIO CONTROL of the ITM Pilot Plant; thus the operation could be carried out from a simple and understandable operator terminals.

ACKNOWLEDGEMENT

We would like to take this opportunity to express our sincere gratitude to our Project Advisor, Cik Norlida Buniyamin, for her advices and encouragement.

Special thanks to the Instrument Instructor, En. Mohd Dan for his continuous supervision through out the preparation of this project.

Also we would like to extend our deepest appreciation to the Instrument Technicians, En. Azhar Zainal Abidin and En. Hamdan Amy, And to all those who were involved either directly or indirectly with this project which resulted in its succesful completion.

Thank You.

Nur Malik b. Mohamed Dahari
&
Mohd Faizal b. Shaari.

TABLE OF CONTENTS	III
<u>CHAPTERS</u>	<u>PAGES</u>
1. INTRODUCTION	I
2. SYSTEM CONFIGURATION	3
2.1 YEWPACK MARK II Operator Station (UOPS)	4
2.2 YEWPACK MARK II Field Control Unit (UFCH)	6
2.3 Field Monitoring Unit (UFMH)	7
2.4 HL-Bus Communications	8
2.5 Operation Functions	8
2.6 YEWSERIES 80 Electronic Control System	10
3. PILOT-PLANT RATIO CONTROL	
3.1 Flowchart of the Ratio Control System	12
3.1.1 Preparation for Operation	
3.1.2 Sequence Operation	13
3.1.3 Filling Process	13
3.1.4 Heating Process	13
3.1.5 Ratio Process	15
3.2 Description of the Flowchart	17
3.2.1 Filling Process	17
3.2.2 Heating Process	19
3.2.3 Ratio Process	20
4. EXPERIMENT	
4.1 Experiment Procedures	22
4.1.1 Loading Software into System	23
4.1.2 Project Execution	23
4.2 Monitoring And Control	24
4.2.1 Filling Process (STEP 1)	
4.2.2 Flow 1 Control (FIC 100)	
4.2.3 Flow 2 Control (FIC 200)	

1. INTRODUCTION

Instrumentation system existed for a long time ago and nowadays is becoming very important in industries such as power plant, manufacturing and etc. The instrumentation system has brought tremendous progress especially in time and labour savings.

Process instrumentation and control techniques are particularly used in small to medium scale processing operations, oriented to systemization which is complicated and diversified. In systemizing, shifting simple loop control to composite loop is progressing tightly coupled with sequences control techniques. Nowadays, since computer are so popular, communication functions with supervisory computers is becoming an indispensable condition. The shift to composite loop control is carried out aiming at higher quality product. Sequence control techniques include automation of batch processing and start up procedures; and incorporation of various interlocks.

Responding to the above need, several processing and controlling computer system have been developed, for example Centum, Centum XL, YEWPACK MARK II and μ XL. For our project we are using YEWPACK MARK II Computer Control which is one of the most powerful instrumentation and control system from small to medium scale processing operation, which is superior in cost effectiveness and incorporates advantages of each
