ACKNOWLEDGEMENTS

All praises to God for all His blessing, strength, health and wellbeing that were necessary for me throughout completing this book.

I take this opportunity to express my sincere thanks to my supervisor, Mr. Ajimi Jawan, and my co-supervisor, Dr. Viduriati Sumin, I am very thankful for their immense knowledge, patience, sincere and valuable guidance and encouragement throughout the experimental and field works, and the thesis writing. I would also want to sincere thank my second reader, Mr. Abdul Manap Mahmud.

I want to express my gratitude to my parents for the emotional support, attention and encouragement throughout completing this book, without them completing this book is impossible.

Last but not least, I want to thank my friends Mohd Azrin, Clodia Geofery, Rani Goundilang, Nur Faezah Ibadat, and Serafina Banyu as they willingly helped me in the sampling and distributing questionnaires.

Erica Jaludin

CHAPTER 1: INTRODUCTION	
1.1 Background of Study	1
1.2 Problem Statement	3
1.3 Significance of Study	4
1.3.1 Academic	4
1.3.2 Social	4
1.3.3 Management	5
1.4 Research Questions	5
1.5 Objectives of Study	6
1.6 Hypotheses	6
1.7 Scope of Study	7
CHAPTER 2: LITERATURE REVIEW	
2.1 Water Quality	8
2.1.1 Water Pollution	8
2.1.2 Current status of Water Quality in Malaysia	9
2.1.3 People's perceptions of water quality	10
2.2 Water Quality Index (WQI)	10
2.2.1 Water Quality Index with Missing Parameters (WQImp)	12
2.2.2 Dissolved Oxygen (DO)	13
2.2.3 Temperature	14
2.2.4 pH value	14
2.2.5 Phosphorus (PO ₄)	15
2.3 Theory of Planned Behaviour	16
2.3.1 Subjective Norms	17
2.3.2 Attitude	17
2.3.3 Perceived Behavioural Control	17
2.3.4 Previous studies environmental study using TPB	18
2.4 Integrated River Basin Management	19
2.4.1 Integrated River Basin Governance	20

CHAPTER 3: METHODOLOGY

3.1	Materials	22
3.1.1	Raw materials	22
3.1.2	Chemicals	22
3.1.3	Apparatus	22
3.2	Methods	23
3.2.1	Data collection	23
3.2.2	Questionnaire (Analysed using IBM SPSS)	23
3.2.3	Water Sampling and Analysis (WQI _{mp})	25
3.2.4	Sample collection and storage	26
3.2.5	Sample analysis	27
3.3	Study area	29

CHAPTER 4: RESULTS AND DISCUSSION

4.1	Descriptive assessment of physico-chemical of water quality along the Inanam-Likas River Basin	37
4.1.1	pH value	38
4.1.2	Temperature	39
4.1.3	Dissolved Oxygen (DO)	40
4.1.4	Phosphorus (PO ₄ ⁷)	41
4.2	Water Quality Status	43
4.2.1	Water Quality Index with missing parameters (WQI _{mp})for each station	43
4.3	Respondent	48
4.4	Descriptive analysis of questionnaire	50
4.4.1	Demographic analysis	50
4.4.2	Respondents' awareness and knowledge on water quality analysis	55
4.4.3	Behavioural intention of the Decision Makers toward the Implementation of Integrated River Basin Management in Inanam-Likas River Basin	59
4.5	Descriptive analysis of the relationship between Behavioural Intention with the current Water Quality Status	69

CHAPTER 5: CONCLUSION AND RECOMMENDATIONS

5.1	Conclusion	71
5.2	Recommendations	72

ABSTRACT

THE IMPLEMENTATION OF INTEGRATED RIVER BASIN MANAGEMENT TOWARD PRESERVING THE WATER QUALITY LEVEL IN INANAM-LIKAS RIVER BASIN

Rivers serve as habitat and resources for many living things including human. Water quality is crucial to be maintained and preserved to ensure high quality of life and at the same time conserving aquatic life. To protect the water quality in Sabah, there are many agencies involved such as Jabatan Perlindungan Alam Sekitar (JPAS), Jabatan Pengairan dan Saliran (JPS) and Dewan Bandaraya Kota Kinabalu (DBKK). This study focuses on the Decision Makers' (DMs) behavioural intention of implementing the Integrated River Basin Management (IRBM) toward preserving the water quality in Kota Kinabalu City, by using Inanam-Likas River Basin (ILRB) as the study case. Water samples from six stations along the ILRB were taken and analysed along the ILRB. pH, temperature, and DO were analysed ex-situ using DOmeter, while phosphorus was analysed in-situ using spectrophotometer DR2800. Water quality level of ILRB were calculated using quality index with missing parameters (WQI_{mp}) formula as recommended by Kumar and Srivastava (2014). Set of questionnaires were generated based on the Theory of Planned Behaviour, elements namely attitude, subjective norms (SN), and perceived behavioural control (PBC). The questionnaires were distributed to several agencies, in this study, the questionnaires were distributed to 4 agencies which are, DBKK, JPS, JKAS, and Industries. The data gathered from the questionnaires were analysed using IBM SPSS Version 23. From the analysis, the correlation of the attitude, subjective norms, and perceived behavioural control with behavioural intention of the DMs, and the correlation between behavioural intention of the DMs with the current water quality level were computed. Through this study it is found that the water quality level of the ILRB is in the Medium range, which is ranked as grad C. The attitude; $r = 0.395$, $\alpha = 0.01$, SN; $r = 0.437$, $\alpha = 0.01$, and PBC; $r = 0.562$, $\alpha = 0.01$ has positive linear relationship with the behavioural intention, which means that these three elements influenced the Decision Makers' behavioural intention in implementing the IRBM. In the other hand, it is found that there is no statistical significance correlation between the behavioural intention of the Decision Makers in implementing the IRBM toward the current water quality level in ILRB, which means that even though they had already implemented the IRBM, it does not influence the water quality level in ILRB.
