## **ABSTRACT**

This study focuses on the tear film on a contact lens influence of lens thickness and the slip condition of a Beavers-Joseph. Tear film is a thin film that covers the surface of the eye and is crucial to protect the eyes from external elements, lubricating the ocular surface and maintaining a smooth surface to refract light. The purpose of this study is to obtain the evolution equation of slip condition of Beavers-Joseph. The study also aims to use the Finite Difference method using ode45 as a tool in solving Partial Differential Equations (PDEs). The results revealed the effects on tear film after considering the factors and several parameters such as porosity, gravitational, slip parameter, contact angle and film thickness. The result shows that increasing the lens thickness and slip boundary contribute to increase in the film thinning. It appears from the results of the research that lens thickness and slip conditions can have significant effects on the tear film. Significant understanding of the behaviour of tear film on a contact lens has been gained from the study's findings. Along with having potential applications in the fields of science, manufacturing and medicine, this research can aid in our understanding of pertinent physical phenomena.

## **ACKNOWLEDGEMENT**

I want to begin by expressing my sincere thanks to Allah SWT. Through His divine guidance and blessings, I have effectively finished my final year project within the given time frame. It is thanks to His permission and support that I have been able to accomplish this significant milestone.

I want to express my deep appreciation to Dr. Nurul Ainina binti Redwan, my supervisor, for her invaluable help, guidance and ongoing support throughout the preparation of my final year project. Additionally, I have inadvertently gained knowledge that aids in a better understanding of this study, with practical applications in daily life. I am genuinely grateful for Dr. Ainina's contributions and their significant impact on my academic development.

Finally, I dedicated the work to my lovely parents, Norizan Wahid and Rohani Saidin, and to my siblings that have been constantly supportive and loving throughout my academic journey. Their support has been essential to my success. I also want to thank my friends for the valuable help they provided during the completion of my final year project. Their contributions, no matter how small, have been impactful, and I am sincerely thankful for their presence as I near the completion of my degree.

# TABLE OF CONTENTS

DECLARATION BY THE SUPERVISOR	I
DECLARATION BY THE CANDIDATE	II
ABSTRACT	III
ACKNOWLEDGEMENT	IV
TABLE OF CONTENTS	V
LIST OF TABLES	VIII
LIST OF FIGURES	IX
CHAPTER ONE	1
INTRODUCTION OF RESEARCH	1
1.1    Introduction	1
1.2    Background of Study	1
1.3    Problem Statement	5
1.4    Objectives	6
1.5    Significance of the Project	7
1.6    Scope of the Project	7
1.7    Project Benefits	8
1.8    Definition of Terms and Concept	9
1.9    Organisation of Report	11
CHAPTER TWO	12
LITERATURE REVIEW	12
2.1    Introduction	12

2.2	Literature Review	12
2.2.1	Tear film	13
2.2.2	Slip Condition of a Beavers-Joseph	14
2.2.3	Lubrication Theory	15
2.2.4	Corneal Thickness	16
2.2.5	Porous Layer	16
2.3	Conclusion	17
CHAPTER THREE		18
METHODOLOGY		18
3.1	Introduction	18
3.2	Research Steps	18
3.2.1	Step 1: Topic Selection	20
3.2.2	Step 2: Governing equations and boundary conditions	20
3.2.3	Step 3: Dimensionalisation of the Partial Differential Equations	21
3.2.4	Step 4: Numerical method	23
3.2.5	Step 5: Plotting graph	24
3.2.6	Step 6: Analyse the results	24
3.3	Conclusion	24
CHAPTER FOUR		25
IMPLEMENTATION		25
4.1	Introduction	25
4.2	Implementation	25
4.2.1	Governing equations	26
4.2.2	Boundary conditions	27
