ABSTRACT

Large-scale UO problems have been significantly solved due in part to the CG methods. This research will focused on the modification of existing CG method of RMIL. One of the CG techniques with adequate descent and global convergent characteristics that satisfies an upper bound is the RMIL method. Still, there are certain shortcomings with this RMIL approach. The problem cannot be solved using this method in terms of efficiency and numerical performance. The second inequality of Strong Wolfe line search will be combined with RMIL and its variants to investigate the impact of the second inequality of Strong Wolfe to the performance of the conjugate gradient. This researched aimed to compare the convergence behaviour of CG with and without second inequality of Strong Wolfe. Each method's effectiveness will be compared in terms of the number of iterations, number of function evaluation, and norm. Extension to this study, higher dimension for the test function will be implemented on the IMR and RAMI method as it is perform better in previous study. It is expected that the modified conjugate parameter with higher dimension is more efficient and has minimum NOI, NOF and Norm compared to the existing CG methods.

ACKNOWLEDGEMENT

In the name of Allah, the most compassionate and merciful, I am grateful to Allah for providing me with the opportunity and making it easier to complete this final-year project. All praise be to Allah.

First, I would like to thank my supervisor, Dr Nur Idalisa binti Norddin. I have been extremely lucky to have the opportunity to work with such a knowledgeable, inspiring and supportive researcher. I am deeply grateful to her for introducing me to this fascinating field of research and for all the assistance and encouragement that has been given to me since last year.

I want to express my gratitude to my colleagues, classmates and lecturers with whom I have had the pleasure of working especially for Rwaida binti Ahmad Radzy and Muhammad Azhan Hilmi bin Khairol Amali that gave me support to finish this bachelor degree. Finally, I must thank my family. Without the unwavering love, sacrifice and support from my late father, Ahmad Hisham bin Haji Nor and my mother, Nina Suriani binti Muhammad Salleh. I would not be where I am today and eternally grateful.
