## **ABSTRACT**

A study done in UiTM Pahang Forest Reserved on line 13 to examine and determine the commercial standing trees of dipterocarp and examine the adult and juvenile population of dipterocarp trees. A study area sized 20m x 50m has been choosed. Results from the research showed that the area only has juvenile trees and the commercial standing trees found are almost on Meranti species. From here showed that the plot was in secondary growth after logging.
