TONGKAT ALI (*Eurycoma longifolia*)

By

SHHRIL BIN KAMARUDIN

APRIL 2000

Tongkat Ali (*Eurycoma longifolia*) is the most famous herb tree in Malaysia. The research have been made at UTM forest. The research area is 50m x 50m in size. The research is about the botanical, anatomical and the medical values of Tongkat Ali. In botanical, it explain about habitat, bole, inner bark and leaf. For anatomical, it explain about pores and vessel, parenchyma, rays, and fibers. The important of this spesies are it can release back pain, smooth blood circulation, increase the level of erection, anti-malaria, anti diarrhea, increase energy, anti virus, and release pain.
