ACKNOWLEDGEMENTS

First and foremost, I am grateful to the Lord for the blessing and a good health during conducting this research. This study would not have been possible done without the help of many people in so many ways.

I would like to express my sincere to my advisor, Mr. Abdul Manap Bin Mahmud For all his support, patients and immense knowledge. With his guidance in this study, able to improve my analysis of this research from various prespective. I could not have imagined having a better advisor and mentor for me degree study.

Other than that, I would to thank the rest of my thesis committee which are Mr Ajimi Jawan as the Project Coordinator, Mr Ansir Salim, Ms Patricia, Mrs. Sarayati Mawah and Mrs. Farnidah Jasnie for their endless encouragement and valuable comments. Also, thankful to the Makmal UiTM Sabah's staff because providing me with all complete equipment needed for this research.

Beside that, a very deep appreciation for Bajau informants in Sepanggar Bay, Sabah which are Mohd.Ali, Maliah Lubah, Juin, Sarati Jujin, Rupaina Sabin, Depa, Rahimah Jamari, Arita Jarat, Mohd Johari Tahir, Dana Madri, Jayra Madri Suiyung binti Dawa, Rosna Meet, Juin, Saidi bin Majlan, Siti Makiah Saidi, Hajah Remuna ,Tihawa Haili, Rina Buyun, Haji Ati Alus,Hj Wid Musi,Noradzian, Amit Bimin, Helena Micheal, Sainih Ajam, Normah Sulaiman and Ining Ahmad that provided all the information needed, helping during collected sample and pleasant acceptance during the interview and collection.

I would like also thankful for my parents for their support throughout my journey and my sisters and brothers thank as well for their support and motivation.

Finally, to all my classmate a very thankful for being helpful and support in many moments of my journey.

(Nasyuha binti Jamian)

ABSTRACT

A STUDY OF MEDICINAL PLANTS USED BY BAJAU COMMUNITIES IN SEPANGGAR BAY, KOTA KINABALU, SABAH

This paper about the ethnobotanical study of medicinal plants that were used to treat diseases by Bajau communities in Sepanggar Bay, Kota Kinabalu, Sabah. This study conducted by collecting and recording the data by interviewing Bajau medicine man, and knowledgeable persons with the help of semi-structured and open ended questionnaire. The data that were documented are listed along with their indication, part used, form of preparation and route of administration. Then, the sample (claimed plants) were taken for further identification species. The results then further analysed in order to determine Informant Consensus Factor (ICF) and Fidelity Level (FL) of the plants on the basis of their use under various ailment categories. This study has documented 54 medicinal plant species from 41 families used for the treatment of 16 different ailment categories. The most frequently used plants part is leaves (47%) while decoction is the major form of preparation which is 40 percent. Afterwards, the dichotomous key of 54 medicinal plant consist of 1 Kingdom (plantae), 1 Division (Magnoliophyta), 2 Class (Liliopsida and Magnoliopsida), 9 Sub-class, 25 order, 41 family, 51 genus, 4 spesies. In terms of the Informant Consensus Factors index (ICF) showed that the local people tend to agree more to each other in term of the plants used to treat general health (0.88) and liver disorder (0.88). Meanwhile, the Fidelity Level index shows that Senna alata (L.) Roxb, Chromolaena odorata (L.) R.M. King & H. Rob. Terminalia catappa L and Orthosiphon aristatus (Blume) Mig were plants with the highest ICF value (100%). The ICF and FL values can be subjected to bioassay guided investigation and probably producing new drugs to treat disease for further study.
