CHAPTER 1

INTRODUCTION

1.0 INTRODUCTION

Towards a country with the successful development can be seen with the infrastructure and construction building. The infrastructure must be suitable with the requirement for the people to do an activity. Based on that, the construction activity must be following the requirement to prepare a comfort to the people. From that, the national economic also increase through the investment to the construction. But, when the construction building is complete, the buildings have been facing the problem after few years it operates. So the maintenance is very important to ensure the problems can be solved and maintain their function in the future.

Building maintenance according British Standard 3811 (1976) is defined as the work undertaken to keep, restore or improve every part of a building, services and surrounds. It shows that building maintenance is responsible to the whole part in the building. To achieve the good performance in maintenance, the management should be having a planning in their maintenance. The maintenance management are involves planning, directing, controlling and organizing maintenance process and services to obtain
