CHAPTER ONE

INTRODUCTION

1.1 BACKGROUND OF STUDY

Humans need a balanced knowledge of their lives. Without knowledge, a country cannot produce a stable country. Therefore, motivation and inspiration are very important roles for the students. Motivation is the word derived from the word 'motive' which means needs, desires, wants or drives within the individuals. Beside, inspiration is a feeling of enthusiasm you get from someone or something, that gives you new ideas such as idol.

Inspiration also can define as a process that encourages or stimulates the mind to do something especially creative. It is mentally stimulated to take action after seeing or learning something around. Inspiration is different from motivation, which is the process that motivates or influences a person to achieve what they want. While inspiration is a creative idea that comes from within after a stimulus from the outside. But inspiration can motivate a person to reach their goals

Developed economies need a creative community for national development. Therefore, students play a key role in achieving this goal. As a result, inspiration and motivation can help students make the right choices, especially for their studys. They will be smarter in managing their free time to achieve a better future

1.2 PROBLEM STATEMENT

Every student has different ways and perspective on how they handle their studies. An inspiration and motivation is needed to enable a student to enjoy what their studying rather than having to stress themselves studying something that they are not really interested in. Other than improving persistence and effort of an individual, motivation and inspiration can also improve one initiative and overall performance.

Nowadays, a lot of students are lacking in motivation to perform better in their studies. Most of them have negative thoughts such as laziness and “no mood to study”. These problems would affect their studies whether it comes from within the student themselves or from their peers’ influence. Everyone was born differently. For example, there are students that struggled in Mathematical subjects while some actually enjoyed learning it because they were motivated to do good in that particular subjects.

Students need to realize that having a motivation will help a lot in their studies. They could find out things or people that would motivates them and give them inspiration to be a better student and strive for a lot of achievement to not let their life from being wasted.

1.3 OBJECTIVES

The objectives in this study are written as below:

- to study what kind of motivation that influence students on doing better in studies
- to investigate how the motivation can help student to be better in studies

1.4 SIGNIFICANCE OF STUDY

This study is expected to give information to the students that motivation is really affecting their study achievement. Motivation has an important role in students' life because when they have their inspirations, they will feel a deep-rooted passion and motivation to do something. And surely they will work hard in studies to get a better result compare to the student without motivation.

Besides, motivation is actually gives awareness to the students to get up from laziness. It will make the students realize that they need to study hard to achieve the good result and be better in studies. Since the laziness is the biggest enemy to the students, so they should have biggest motivation for themselves in order to be better in the studies.

CHAPTER TWO

METHODOLOGY

2.1 TARGET POPULATION

Population of the study can be defined as all subjects (human or otherwise) that are being studied. In this study, the target population is all 8000 students in UiTM Machang, Kelantan that consists of male and female students.

2.2 SAMPLE

The definition of sample is a group of subjects selected from a population that are being studied. Diagram below shown the population and sample size.
