**Final Project Submitted in Partial Fulfillment for the
Diploma in Wood Industries, Faculty of Applied Science,
Universiti Teknologi MARA**

SEPTEMBER 2002

ACKNOWLEDGEMENTS

I would like to express my deepest appreciation sincere gratitude to my advisor, Miss Mazlin Binti Kusin for his encouragement and guidance in designing and implementing this project.

Sincere thanks are also due to Assoc. Prof. Dr. Jamaludin Kassim, Program Head of Diploma Industry Perakayan, UiTM Pahang, and En. Wan Mohd Nazri Wan Abdul Rahman for kindly extending all facilities and cooperation given during the course of study.

Last but not least, thanks are also due to my beloved parents and my lover for their moral and financial support throughout the years study. I also would like to extend my appreciation to those who are involved either directly or indirectly in completing this project. I believed, without their helps, I would not be able to complete this final project.

September 2002

ABSTRACT

Forest fire is a new phenomenon in Malaysia. It is separate into three parts. Three parts of that is surface fire, crown fire and ground fire. Forest fire can happen because of several factors. Among that are bad weather, forest utilization, land preparations, forest utilization, land occupancy, incendiary and natural causes.

Forest fire can be effect to environment and human in long time period or in short time period are air pollution, can stop the travel of fire ecology, disease infection, and increase world temperature and other.

Steps that were taken by certain party such as give awareness to people about the dangerous of forest fire in our life. Using the high in technology equipment in detect forest fine also decrease by using the incendiary. In that way total of fine forest can decrease and problem can be settle.
