

THE FASTENER USES IN INTERIOR PURPOSE

**BY
NORZALINA BINTI JAAFAR**

**Final Project submitted in partial Fulfillment for the Diploma in Wood Industry,
Faculty of Applied Sciences,
Universiti Teknologi Mara, Caw. Pahang**

October 2004

ACKNOWLEDGEMENT

First at all I would like to thank Allah S.W.T because it is for the blessing will that I worked to finish my final project.

To Miss Norhafizah Bt Rosman, if I can give the world to you, I would like to show my gratitude to you. Thanks for helping me in every stages of making this final project.

Then I would like to say thanks to my friends ila, angah, shima. Thanks for lending me your shoulder when I needed them. Thanks lending the scanner and help me with ideas. And for my classmate thank for helping me through the difficulties.

Lastly I would like show my appreciation to those who involved directly and indirectly in making on this final project. I believe without their help and support, I can't finish this project on time.

ABSTRACT

In the furniture industry, fastening wood is the most important thing to do. There are types of fasteners that can be used in making furniture such as nails, screws, bolts and nuts, and dowels. For most of the nails and screws made for the furniture industry, they have their own specifications that are suitable for their uses in furniture making.

The uses of different fasteners give different effects on furniture. It also gives unique looks to the furniture. The specifications include length, strength, head type and threads. All kinds of fasteners, especially nails and screws, are easily available, easy to install, have great holding power, and screws are easily removed without damaging the work and providing a neat experience.

Other hardware components, except fasteners, are joints and connectors. Each component is different from the others. For fasteners, nails, screws, bolts and nuts, and dowels are used as components, and their strengths vary across all the components.
