## **ACKNOWLEDGEMENT**

First of all, I would like to thank you the Al Mighty ALLAH for His blessing and favor in guiding me towards the completion of this project paper.

To my respectful advisor, Cik Mazlin Bt. Kusin, thank you for her assistance, patience and kindness during the project.

Thank you also to the staff of Perpustakaan Al-Bukhari for their priceless help in finding the reference materials for this library research work.

Further gratitude also dedicated to my loyal and true friends who offers help when I needed most.

My appreciation also goes to other individuals who has involved directly or indirectly in the completion of this study.

# **APPLICATION OF GEOGRAPHICAL INFORMATION SYSTEM (GIS) IN WOOD INDUSTRY TOWARDS A GLOBAL USE**

By

Nur Sabrina Binti Abdullah

March 2004

## **ABSTRACT**

Wood industries in Malaysia nowadays have experienced tremendous development. The sector's contributes to the nations income by export earning of wood based products and create employment for the growing Malaysian population. To enter the global economy, this sector should develop a platform where we can contribute and share information in this industry. To implement this effort, Geographical Information System (GIS) can be a powerful tool. It was a computerized computer system which can combine many layer of information. This system required hardware, software, data , trained users and sound analysis methods for interpreting the results generate by the GIS. The application can be useful to government bodies, private sector, and the public alike. This study will highlights on the application of the GIS in wood industry towards a global use such as its potential usage, sources of information data, implementation problem and prevention taken.
