

THE ERGONOMIC OF OFFICE CHAIR

BY

RAHFIZAH BINTI CHE RAHIM

**FINAL PROJECT SUBMITTED IN PARTIAL FULFILLMENT FOR THE
DIPLOMA IN WOOD INDUSTRY
FACULTY OF APPLIED SCIENCE
UNIVERSITI TEKNOLOGI MARA**

OCTOBER 2004

ACKNOWLEDGEMENT

Firstly, I would like to take this opportunity to express my special thanks to Almighty Allah S. W. T because with blessing and faith that brought me to complete my final project paper.

Beside that, I would like to thanks to my lover's advisor, Cik Norhafizah for her guidance in helping me at every phase of study. Every encouragement on the advices, comments and suggestions, I would like to express my most sincere thanks for her.

I also would like to thank to my beloved parents for giving me some advice and moral support for my project paper. Thanks also for their prayers and bless me to success in learning. I really appreciate it. .

Lastly, I also thanks for those are involved either directly or indirectly in completing my project paper. Also special thanks to my friends. Well, I believe that, without their help, maybe I would never be able to complete this final project properly..

ABSTRACT
THE ERGONOMIC OF OFFICE CHAIR

By

RAHFIZAH BINTI CHE RAHIM

OCTOBER 2004

Ergonomics has been known as one of the other contributing factor to comfort and safety in product usages a result, many manufacturers have taken the initiative to implement ergonomics onto their product in order to convince the consumer on their product advantages and to differentiate from their competitor.

However, many mistakes have been done especially in the implementation of ergonomics onto product. In furniture design, we should understand what the basis requirement of ergonomics is. Applying lots of mistakes has been done and this paper will explain in brief the way ergonomics should be implemented in the furniture design.

As generations succeed each other, people expectation change, building on historical experiences so that what was accepted by one generation becomes unacceptable to those which follow. What was at one time a relatively local phenomenon, with modern communications have become world wide, living and working conditions are subjected to common demands. The European community is a clear example of this trend, both for reasons of social justice and economy this common market requires that working conditions across its member states shall be broadly equivalent.

In pursuit of this equivalence, basis regulatory measures are passed, and many of these now call, overtly, for ergonomic solutions to work problems.
