DECEMBER 2020

## **ACKNOWLEDGEMENT**

I might want to thank the individuals who have caused me in completing this thesis. First by any stretch of the imagination, I genuinely thank my parent for their adoration and nonstop monetary and backing during my entire investigations. From the earliest starting point, they gave me opportunity and time to learn and investigate all that I need to learn.

Secondly, I would like to thank my supervisor Pn. Siti Arpah Ahmad for giving her help, management, support and persistence all through this venture. The help, support and recommendation given by my boss have encouraged me a great deal and helped me in building up this system and my thesis.

I additionally might want to give my gratefulness to my companions for their direction and backing all through the entire cycle of finishing this thesis.

Thank you very much

## **ABSTRACT**

Nowadays there are already many job portal web applications available in the World Wide Web such as Job Street, MauKerja and Monster. In each of this web applications, they cover all types of job in every industry to offer for user from agriculture, healthcare, banking and creative arts. When this happen, it will be hard to navigate the website to find the job that user wanted. They will find the job but it will take some time to accustomed to the website design and interface with all the different jobs that they are offering randomly. To solve this problem, Job Access web application will be developed where it focuses on computer science industry. All type of jobs vacant that involve computer science can be publish and promote here. Job for computer science major cannot be underestimated because there are many requirements of skills and expert in any software that is needed for the job. Job Access web application will display all of it and making sure Computer Science graduate from any University and any people that have the computer skills find their suitable job here and making Job Access their first choice of Computer Science Web Application Job Portal.

# **CHAPTER 1**

## **INTRODUCTION**

This part gives the overall point, foundation, and reasoning for the investigation. It additionally gives an audit of the writing identified with this point. It likewise gives subtleties of the noteworthiness of security over the web, the issues and issue that lead to this exploration

### **1.1 BACKGROUND STUDY**

In this era of advanced technology, when technology is getting advanced, that doesn't mean jobs availability are increasing as fast technology is advancing, and right now there is no suitable job for everyone. As the worldwide economy keeps on recuperating, the workforce is improving, even though at a slower speed.

Global unemployment is projected to be around 5.5 percent in 2018, slightly better than the 5.6 percent reading in 2017 on the back of a better global GDP outlook, with an expected growth of around 3.6 percent in 2018 from 3.3 percent in 2017 (The Star Online, 2018). You're wasting years preparing to graduate. You start looking for a job after graduation, naturally so you can be your own person and no longer have to rely on your parents. Now, there are many positions available, but you are still unemployed, not earning a wage. Finally, you start to think about it (The Asean Post,2020). This show that even we have a high education certificate, such as degree or diploma, it doesn't mean we are guaranteed a high salary job and suit with us. When this happen, what the government or private sector ask is for us to accept low end type of job.
