E-Activity Announcement System

Nur Syahira Binti Mohamad Sobri

Thesis submitted in fulfillment of the requirements for

Bachelor of Computer Science (Hons.) Netcentric Computing

Faculty of Computer and Mathematical Sciences

January 2016

ACKNOWLEDGEMENT

Alhamdulillah, praise and thank to Allah S.W.T. because of His Almighty and His utmost blessings, I was able to finish this research within the time duration given.

First of all I would like to address my deepest appreciation to my supervisor, Dr. Zolidah Binti Kasiran for help and guidance to finish this project. A big thank is also dedicated to my lecturer for this subject, Sir Kamarul Arifin Bin Basit for teaching me and guide me to finish this report and my final year project.

Special appreciation also goes to my parents, Mohamad Sobri Bin Awang and . Same goes to my family who always pray for my good and moral support me to finish my study.

Last but not least, I would like to give gratitude to my dearest friend who always help, support and give opinion in completing my final year project.

Thank you, may Allah S.W.T. bless all of you.

ABSTRACT

The current event's advertisement in campus is inefficient as club's society has to print up poster and post it in the notice board and hang banners in order to get attention from the students regarding the event that they held. Therefore, I proposed a new method of advertising the event, namely E-Activity Announcement System. By using previous advertising method, it sometimes can lead to problem. For example, students are not alert with the poster posted on the notice board and they only know about the event from their friend. Thus, it can lead to inaccurate data and they are not clear about the details of the event. In this project, I develop a system that can update the details of event and also display the poster. E-Activity Announcement System is designed to help fasten information's delivery about the event to students. This system will use emails push notification to announce user or students about upcoming event so that student can acknowledge earlier than usual. This system not only focus on student but also for advisor and committee of the club. They just need to update the new event in this system then student will get the updated information. Methodology that is used in this project is waterfall model that consist six phases which are requirement analysis, system design, implementation, testing, deployment and maintenance phase. Hopefully this system will be able to help student to know about the event that will held timely and also make club's society advertise their upcoming event easily.

CHAPTER 1

INTRODUCTION

This chapter provides the project background and relational for the study. It also gives details of the problems that led to this research, objective, scope and significance of the project.

1.1 Project Background

The e-Activity Announcement System is from the idea of researcher which wants to use this system to notify people regarding current and future activity in campus. Basically, the target people are from UiTM residents and more focus on club's advisor, club's committee, and students. Nowadays, all clubs that want to do any activity have to provide a lot of posters which will be posted on the notice board or make an announcement in order to inform all students. The research by researcher found that student barely alert with that and tends to be quite troublesome for student who's staying outside.

Besides that, the club's committee also inform actively on social media like facebook and twitter. But, problem comes when students not aware or miss look about the post due to too many things posted on the newsfeed. This media is not specifically use for activities in campus only but others too. Events in campus are very important pieces of information that need for student to be known in the right time in order to be valuable, because if such information is delivered late, it will be meaningless.

The e-Activity Announcement System can help UiTM residents especially club's advisor, and committee by send the email notification to student. Club's advisor and club's committee can update current and future activity and inform all students just through mobile phone. This system will show email notification on the lock screen on mobile phone. Student can have useful
