### ABSTRACT

Verdant Eden Space Design is a unique space design that combines nature, recreation, and modernity, offering a peaceful retreat within the university park. The park features architectural elements that evoke natural forms, fostering a seamless integration between built environments and the natural world. Elevated pathways and dynamic structures with solar panels to generate power, adorned with vertical gardens and climbing plants, this space invites visitors to explore and interact with their surroundings. Eco-friendly walkways with footsteps generate power meander through the park, offering varying perspectives and encouraging discovery. The sculptural canopy, with its organic shape providing shelter and shade, enhances the park's tranquil ambience. The park also features recreational elements like a rock-climbing wall and a skate bowl, blending relaxation with activity. These features cater to a wide range of activities, from quiet contemplation to physical exercise. Verdant Eden Space's design exemplifies how urban spaces can be transformed into multifaceted environments that promote healing, well-being, environmental awareness, and community engagement. It serves as a model of thoughtful design that enhances design student life and urban living, providing a vital green space that fosters a deeper connection to nature and offers a respite from the urban hustle toward sustainable space design.

**KEYWORDS:** Space design, wellbeing, healing space, green design, contentment

### DESIGN DESCRIPTION

UiTM Perak, with its background as a university with design as its main niche, needs to have a space for recreation, rest, and exercise for design students whether from the built-up environment program or the art program to always stay fit and healthy. A situation like this will give more advantages to students in the learning process and work to produce the best results. Verdant Eden Space design is a serene space that combines natural and modern elements to create a harmonious environment that promotes well-being and environmental awareness. The design offers various activities, from relaxation and contemplation to physical exercise and social interaction. Key features include sculptural canopies, vertical gardens, elevated pathways made from sustainable materials, and recreational areas like a rock-climbing wall and skate bowl. The idea behind the design is:

- Concept and Ideas – Design is a niche area and strength for the UiTM Perak campus, the metaphor of the hand is very closely related to students whether they are Alam Bina students or Art students.
- Solar Panel Roof Structure – not just for shade but also designed to generate electricity from solar energy

- Footstep power generation system – a combination of terracotta floor finish pattern design and footstep power generation system by piezoelectric sensor technology in the production of electricity for use by plug points for users
- Foot Massage – the use of materials from river stones and pebble wash of various grades is not only used as a floor finish pattern design but also as a therapy and foot massage.
- Rock Climbing wall – one of the attractions of this space for exercise and training mind focus as well as self-resilience
- Multi-layer Seating & Skating – some users can make the elevated space as a seat, reading as well as a platform for skating activities.
- Herbs and plant landscape – the selection of Cambodian trees with flowers and flower trees to repel mosquitoes is available for the user's sense of smell therapy
- Green design – the combination of the design elements suggested above makes it an environmentally friendly space design.

Overall, the space design functionality and performance are multifunctional, supporting both passive and active uses. Transparent and semi-transparent materials in the canopies create an interplay of light and shadow, adding to its tranquil ambience. The user interface and user experience are ensured through well-placed pathways and clear signage, while elevated walkways and strategically positioned seating areas provide comfort and convenience. The space design caters to a wide range of users, including families, professionals, students, and fitness enthusiasts. Its design ensures there is something for everyone, making it a valuable addition to any urban area. Applications include relaxation and recreation, community events, and educational activities. Benefits include enhanced well-being, environmental sustainability, and community engagement. The space design is a model of innovative urban design that transforms city spaces into vital green sanctuaries, fostering relaxation, inspiration, and community engagement. By incorporating eco-friendly materials and promoting biodiversity, the park supports environmental conservation efforts and fosters social interaction and community building.

### **NOVELTY AND UNIQUENESS**

Verdant Eden Space Design is an innovative concept that transforms unused locations into brilliant green parks. This design incorporates sophisticated green technology, such as vertical gardens and solar-powered lights, to promote an eco-friendly atmosphere. The combination of nature and infrastructure provides new recreational opportunities for users, especially design students. This strategy not only revitalizes the UiTM landscape area but also encourages sustainable university life, establishing a new standard for future urban planning and development.

### **BENEFITS TO MANKIND**

Humanity benefits a lot from the Verdant Eden space garden design. By creating green areas that improve air quality, it tackles important problems like urban traffic and pollution. By using eco-friendly designs and materials, this park encourages sustainability. It is economically beneficial to local companies and property values. As a teaching tool, it functions as a living laboratory for urban planning and environmental studies. It promotes community involvement and well-being by providing a socially and culturally inclusive venue for a range of activities. While it revitalizes areas and enhances the quality of life for locals, it also establishes a precedent for creative urban solutions globally.

### **COMMERCIAL POTENTIAL**

There are a lot of economic possibilities for space design. The market is driven by the growing need for creative infrastructure solutions and green spaces in cities. Due to its distinctive design, it has a competitive edge and draws both investors. Public-private partnerships, event and concession revenue, and sponsorships can all be a part of the business plan. Scalability is excellent, and the idea may be applied to different places. The design is proposed with the aim of meeting the lifestyle of design students who desire a healthy life, recreation, and an increased source of inspiration can be used as an example and built in other places whether public or private universities.

## CONCLUSION

Verdant Eden Space Design is a university-specific sustainable urban space that integrates natural elements with modern architectural innovations. It offers a harmonious environment for design students, promoting physical health, mental well-being, and creative inspiration. The space is a hub for physical activities, social interactions, and educational experiences. Innovative features like solar-powered structures, footstep power generation, and eco-friendly materials set a new standard for green design in educational institutions. The scalability and adaptability of the project make it a model for future urban planning and university campus development. It enhances campus quality of life, fosters community engagement, and contributes to environmental sustainability.

## ACKNOWLEDGEMENT

We express our heartfelt gratitude to the IUDec 2024 organizers for this incredible opportunity to showcase our talents. Our sincere thanks extend to the esteemed panel of judges for their valuable feedback and encouragement. We are deeply grateful to our group advisor, Mr. Nordin Bin Misnat, whose unwavering support and guidance have been instrumental in our journey. Finally, a big thank you to all our group members for their dedication, creativity, and teamwork, which made this project a success. This experience has been both enriching and inspiring, and we are proud to have been a part of it.

Prof. Madya Dr. Nur Hisham Ibrahim  
Rektor  
Universiti Teknologi MARA  
Cawangan Perak

Tuan,

**PERMOHONAN KELULUSAN MEMUAT NAIK PENERBITAN UiTM CAWANGAN PERAK  
MELALUI REPOSITORI INSTITUSI UiTM (IR)**

Perkara di atas adalah dirujuk.

2. Adalah dimaklumkan bahawa pihak kami ingin memohon kelulusan tuan untuk mengimbas (*digitize*) dan memuat naik semua jenis penerbitan di bawah UiTM Cawangan Perak melalui Repositori Institusi UiTM, PTAR.

3. Tujuan permohonan ini adalah bagi membolehkan akses yang lebih meluas oleh pengguna perpustakaan terhadap semua maklumat yang terkandung di dalam penerbitan melalui laman Web PTAR UiTM Cawangan Perak.

Kelulusan daripada pihak tuan dalam perkara ini amat dihargai.

Sekian, terima kasih.

**"BERKHIDMAT UNTUK NEGARA"**

Saya yang menjalankan amanah,

**SITI BASRIYAH SHAIK BAHARUDIN**  
Timbalan Ketua Pustakawan
