

PRACTICAL PROCEDURES IN KILN DRYING

BY:

MUHAMMAD HAKIMI BIN HASSAN

**Final Project Paper Submitted In Partial Fulfillment for the Diploma in Wood
Industry, Faculty of Applied Sciences,
Universiti Teknologi MARA.
March 2005**

ACKNOWLEDGEMENT

First of all I would like to express my gratitude and thanks to ALLAH S.W.T. because with His blessing I was capable of contributing full commitment and effort in preparing this project “Practical Procedures in Kiln Drying”.

Moreover, I’m also would like to thank and acknowledge my project advisor, Professor Madya Abd Jalil Bin Ahmad for the encouragement and guidance given to me till this project is completed.

Furthermore, I gratefully acknowledge the assistance, support and encouragement of my lecturers in providing me with information and experience. Thus I get the strength to enter in to this project.

In addition, I also wish to extend thanks to those individuals who have contributed directly or indirectly in the preparation of this project for their constructive comment.

I really appreciate the contribution towards the preparation of this project.

PRACTICAL PROCEDURES IN KILN DRYING

BY:

MUHAMMAD HAKIMI BIN HASSAN

MARCH 2005

ABSTRACT

Wood must be dried before use. The practical procedures in dry kiln are important. Lumber drying is one the most time and energy consuming steps in processing wood products. Dried lumber has many advantages over green lumber for producers and consumers alike. Efficient kiln drying of lumber is therefore if key importance in the utilization of our forest resources.
