ACKNOWLEDGEMENT

First of all, I would like to this opportunity to gratefully thank to God The Almighty for giving me a good health and time to complete this research project within the time given.

Next, I would like to record my gratitude to my supervisor, Mdm. Emelia A.Girau for the valuable assistance and advices. I am very grateful having her guidance and constant supervision as well as for providing necessary information regarding the project and also for her support in completing the project. Not just a fully guidance to me, but a motivation to work harder and gives the best in this research project.

I would also like to give a very special thanks to my parents and my family for giving me a lot of encouragement along this journey. Not forget to all my friends who help me until this research project done completely

Lastly, I would like to thank Universiti Teknologi MARA for giving me the opportunity and allowing me to use the facilities provided by the university.

Thank you.

ABSTRACT

This paper studies about the effect of variables (EPS, PER, ROE, ROA) towards the stock prices. This paper consists of four different ratios that were used to test the stock price. Other than that, this study also reveal that stock price performance does not only depending with one variables. This is because sometimes, some of the variables need each other. In addition, this paper will examine which variables affect other variables, and which contribute the most in stock price performance. This study done on Malaysia Construction Sector and intend to guide the investors for decision making and for long-term growth. The data was collected from 2011 to 2015 and was analyzed by panel data. The findings show that only EPS and PER have significantly positive relationship towards the stock prices.
