Final Project Submitted In Partial Fulfillment for the Diploma in Wood Industry,  
Faculty of Applied Science  
Universiti Teknologi MARA  
Pahang  
November 2008

## ACKNOWLEDGEMENT

Firstly, we like to thanks to Almighty Allah for his blessing to finish my final project paper.

We also want to express my special thank to our advisor Miss Mazlin binti Hj. Kusin of her willingness to contribute her knowledge, time and effort till we complete this final project paper.

Thanks also to our lecturer because of their commitment in help us in our project. Especially to Associate Profesor Dr. Jamaludin bin Kasim because give us guideline how to make the best thesis.

We also not forget to DIP staff, especially En. Anuar bin Mohd Yaacob and En. Khairilnuar bin Zainol for helping us to identify pioneer species.

Not forget to our entire member especially our roommate and classmate who always give support and commitment to help us. For our beloved friends from ASD6TA, ASD6TB, ASD6TC and ASD6TD, thank you for your support during finished this thesis.

Thank you all.

NOVEMBER 2008

The UiTMJFR is a forest reserve in Pahang with about 250 acres. This study was recorded the distribution of Mahang Kapur (*Macaranga hypoleuca*) and Sesendok (*Endospermum diadenum*) in UiTMJFR at logging road area. UiTMJFR has much type of pioneer species, but we decided to choose two from them because of timing constraint. In this study it was found 18% and 82% for Mahang Kapur and Sesendok respectively. Sesendok is the most found in UiTM Jengka because it easily growth in lowland and expose to sunshine. This survey also to study a suitable of height and diameter of trees growth at logging area.
