ABSTRACT

Stock market and investor decisions become popular in finance researches. The effects of anomalies and psychological biases of behavioral finance on stock returns are also draw great attention. There are lots of academic studies which focus on sports matches and stock market returns. However, this study considers data from six football clubs, Manchester United and Arsenal (England), Juventus and AS Roma (Italy) and AFC Ajax (Netherlands) to test the link between their European performance (wins/draws/losses) and their stock returns. This study report (a) positive effects on Manchester United and Borussia Dortmund's stock returns, and (b) negative effects on Arsenal, AS Roma, AFC Ajax and Juventus. These findings are recommended to financial managers and investors who is dealing with football stock prices.
