ACKNOWLEDGEMENT

First and foremost, I would like to express my highest gratitude to Allah S.W.T for His guidance, bless and for giving me the strength to complete this Final Year Project Paper within the stipulated time.

I would sincerely like to thank to my advisor, Mr. Marius Benedick for the knowledge and guidance to complete this final year project paper since the early days. Thank you for the continuous supports, supervision and motivations. You always gave us views and perspective through advices and making correction where we have gone wrong. Your encouragement helps us through this project.

A lots of thanks also to my researcher's member in helping me direct or indirectly in order to giving any idea and solution of what I have been done today. I already tried hard to complete this paper especially in gathered all the information.

Last but not least, thanks to my family and friend who are always supporting and showing their willingness to help in realizing this project paper. Thank you to all of you that involved direct or indirectly to make sure this paper completed smoothly.

ABSTRACT

This study aims to give the evidence of whether financial ratios are able predict the future stock return in Malaysian Stock Market. Three variables are used as a predictor of future stock return which are the Book to Market Ratio (BTM), Dividend Yield (DY) and Earning per Share (EPS). This study cover the Period of 2011 to 2015 using 30 companies in Bursa Malaysia Stock Exchange. Results from the multiple regressions analysis shows that only BTM and DY are able to predict future stock return, as EPS is insignificant. In addition, DY has superior predictive power compared to the other variables
