ACKNOWLEDGEMENT

In this section, I want to give a huge relief and appreciations to my advisor, Madam Sarmila Udin who has advised me in many aspects while doing this research. She has taught me very well and helping on any hard situation that occurs during finish this research. Second person I want to thank is Dr. Imbarine Bujang. He also helped me in doing the right way to analyze the data. Without his helped, I might not able finish the work on time and clueless in doing the research. Next appreciation I want to give is to my parents. My parents have given me a lot of moral, idea and financial support in doing this research. They also understand the time constraints that occurs on me and able to give me space while doing this research. Not forget to give a big thanks to my friends that also helping me to make a success research. They also give many ideas regarding to the research. Although they have the same situation as I am in doing this research, they able to give a benefit ways to solve of my problems. All persons that involved in helping me to finish this research have given a relief and I was able to finish this research as it is required in our study.

	3.4 Research Design	
	3.5 Data Analysis and Hypothesis Testing	23-24
	3.6 Flow of Research	25
	3.7 General Hypotheses	26

ABSTRACT

This study have dispute between traditional and modern concept pertaining to the currency rate determinations. Many researcher claims that the determinations on economic variables. However, there are also certain researchers that deny the assumption and claims that there are other variables also need to be considering in order improving the currency rate.

The reasons of this study are to determine how both monetary and fiscal policies might affect the currency rate. Moreover, this study also wants to identify which variables in both policies give the most significant effect to currency rate.

Therefore to be able to generate the findings, this study used Multiple Regressions Method to obtain the result from the data from each variable. Next the result will need to be verifying at 2 tests. The both tests namely Heterokedasticity and Breusch-Godfrey serial correlation LM test.

The findings in this study the result shows that the monetary policy gives an impact to the currency rate. The changes in one of the variable in the monetary policy will affect the currency rate.
