

UPON GRADUATION

The university automatically considers you a part of its alumni after you graduate. It merely signifies that you were a student in the past. Although being an alumni doesn't need you to accomplish anything, you can discover that you have access to some unique benefits. Alumni, for instance, could have access to resources or get discounted library membership fees. Discounts for membership with businesses or professional associations are another possibility. Overall, staying connected with your university and its networks is made possible by being an active member of your alumni association. This connection may open up prospects for further education or employment.

UPON GRADUATION

You might already be certain of the next step you want to take by the time you graduate. Here are five alternatives for people who do not.

01

Obtaining Work

Many graduates want to move from their studies to a paid position in their profession as soon as possible. Utilizing the momentum of your postsecondary education and the freshness of your training to apply right away for relevant positions can be beneficial. But keep in mind that not all recent grads will be hired for a position that completely suits their qualifications. You can be up against applicants with a degree and professional experience on their resumes. You could think about whether it would be helpful to initially accept employment outside of your industry with the intention of eventually transitioning into your preferred vocation.

02

Employing People

Entrepreneurship is an alternative to looking for work. Self-employment enables you to create a position that specifically utilises your set of abilities. If you studied cinema and television, for instance, you might start a career as a freelance photographer. You can decide what kind of job you do and when you do it as a self-employed person, which is a benefit. It may provide great satisfaction. Owning your own company might be exhilarating, but it's not always a straightforward route. Business owners frequently discuss their lengthy workweeks, difficulty taking unpaid holidays, massive administrative workloads, and stress related to finances. The administration of businesses also involves a number of legal considerations.

05

Life Occurs

Whether by choice or not, there will probably come a point when circumstances in your life affect your trip. You might choose to avoid the paths of job, travel, and education if you have children, have health issues, or deal with the elderly or the disabled. The new path can be a pleasant one for some people and a frustrating one for others. No matter how pleasant or unwelcome life events are, you might find it comforting to think of them as a season that will pass. The doors to a profession, travel, or additional education might not be permanently closed.

UPON GRADUATION

Life after graduation can appear like an exciting horizon you are travelling towards. However, when you finally reach it, it may hold some unexpected challenges.

03

A Break from Everything

While taking a vacation can be a good experience, it should be properly handled to avoid having a detrimental effect on your chances of finding job in the future. Make sure you are aware of any deadlines for converting any provisional professional registrations you may have received after receiving your degree into full registrations. For instance, if you do not start working as a practitioner in your profession within a specific amount of time, your qualification for teaching appointments or positions in health services may be jeopardised. It's not necessary to take a full year as a "gap year." Instead, think about when it would be ideal to resume your job hunt. Look into the potential expiration dates for any provisional registrations and see if there are any seasonal shifts in the need for workers in your industry.

04

Further Research

You might think about taking your research in another way. After graduating, you can explore the new world of postgraduate studies. The opportunity to improve your knowledge and expertise is provided by postgraduate study. There are several choices, including postgraduate certificates, diplomas, master's degrees, professional doctorates, and PhDs. Investigate the choices on tertiary websites. If you discover a subject at another university that interests you, or if you are drawn to living in a different city, state, or country, you may want to think about switching universities. For people who have spent a significant amount of time in the workforce, postgraduate study is another common choice. Resuming your function as a student and learning more about your area of interest can be enjoyable.
