NATIONAL LIBRARY OF MALAYSIA
Revised Architectural Brief

0.1 INTRODUCTION

Under the Second Malaysia Plan the Federal Governemnt provided an allocation of \$2.5 million for the construction of the National Library Building. A 6 acre site was accordingly purchased in 1971 adjacent to Muzium Negara but owing to various factors, construction could not be undertaken early in the Plan period. In 1974 the 6 acre site was appropriated for other purposes. A new site of approximately 5 acres, located along Circular Road adjacent to the San Peng Flats was approved for the National Library in the latter half of 1978. A copy of the site plan is attached. In the meantime, the National Library, which has been growing at a very rapid pace, is occupying rented premises of nearly 0,000 sq.ft. at Wisma Thakurdas/Sachdev, Jalan Raja Laut, at Bangunan Maba, Jalan Hang Jebat as well as an old building at Jalan Perdana. It is essential that the new building for the National Library is constructed as soon as possible during the TMP period in order to obviate the continued necessity for the National Library to rent premises.

0.2 ESSENTIAL REQUIREMENTS

The following are the essential requirements of the building:

1. It should cover a floor area of approximately 228,852 s.f.
2. Each floor should cover an area of not less than 38,000 s.f.
3. All floors should have a load bearing capacity of 150 lb. p.s.f. while the closed access stack area should have a load bearing capacity of 250 lb. p.s.f.
4. The building should be designed to permit maximum flexibility
