ACKNOWLEDGEMENT

Alhamdulillah, praises and thanks to Allah because of His Almighty and His utmost blessings, I was able to finish this research within the time duration given. Firstly, my special thanks goes to my supervisor, madam Ummu Fatimah binti Mohd Bahrin.

Special appreciation also goes to my beloved parents Che Wan Samsudin bin Che Wan Sulaiman and Rodah binti Hashim.

Last but not least, I would like to give my gratitude to my dearest friends.

Abstract

The development of a predictive model for condominium prices using the Particle Swarm Optimization-Random Forest approach is the key focus of this research project. This is to establish a trustworthy analytical tool for buyers, sellers, and other stakeholders in the real estate market to gauge condominium costs with great accuracy. Essential phases of the project include data collection, data preprocessing, and the implementation of the Particle Swarm Optimization-Random Forest price prediction algorithm. Both simulated and real-world experiments are used as a basis to rigorously test and validate the predictive capability of the model. The results of the study demonstrate the effectiveness of the proposed model. Specifically, with a dataset split of 90-10, the model achieved an RMSE of 81699.40, an MAE of 136058.74, and an R-squared value of 0.8835. These findings indicate a high level of predictive accuracy, showcasing the robustness of the model in estimating condominium prices. This research will lead to the enrichment of our understanding of how various factors affect condominium prices, with the hope that users will become more informed in their real estate market decisions. The model is highly practical and easy to interpret, making it very suitable for real-world applications. The methods used in this simulation study will be summarized within a comprehensive report, along with the process used in evaluating the appropriateness of using search heuristics in tandem with parallel systems and prospective real-world applications. In general, the condominium price prediction model developed using the Particle Swarm Optimization-Random Forest approach has high value for all real estate sector stakeholders, such as legal professionals, investors, and real estate developers, as it provides accurate price forecasts and practical insights.

TABLE OF CONTENTS

CHAPTER ONE	1
1.1 Background of Study	1
1.2 Problem Statement	2
1.3 Objective	5
1.4 Project Scope	5
1.5 Project Significance	6
1.6 Overview of Research Framework	7
1.7 Conclusion	9
CHAPTER TWO	10
2.1 Predictive Modeling of Condominium Prices	10
2.1.1 Benefits of Predictive Modeling	11
2.2 Condominium Prices	12
2.3 Random Forest Algorithm	14
2.3.1 Overview of Random Forest	14
2.3.2 Features of Random Forest	14
2.3.3 Applications for Random Forest in Real Estate	15
2.4 Particle Swarm Optimization (PSO)	16
2.4.1 Overview of PSO	16
2.4.2 Integrating PSO with Random Forest	18
2.5 Implementation of Random Forest and PSO Algorithms in Various Domains	21
2.5.1 Implementation of Random Forest Algorithm	21
2.5.2 Implementation of PSO Algorithm	25
2.6 Implementation of PSO-Random Forest for Price Prediction	29
2.7 Similar Works and Comparative Analysis	34
2.7.1 Overview of Similar Works	34
2.9 CONCLUSION	41
CHAPTER THREE	43

3.1 Overview of Research Framework	43
3.1.1 Detailed of Research Framework	43
3.2 Preliminary phase	44
3.2.2.1 Data Preparation	47
3.2.2.2 Data Cleaning	51
3.3 Design & Modelling Phase	51
3.3.1 System Architecture	54
3.3.3 User Interface Design	58
3.3.4 Pseudocode of Selected Algorithm	59
3.3.5. Prototype Implementation	62
3.4 Evaluation Phase	63
3.5 Gantt chart	66
3.6 Conclusion	66
 CHAPTER FOUR	 68
4.1 Overview of Project System	68
4.2 Prototype Development	70
4.2.1 Data Understanding	70
4.2.2 Data Pre-Processing	70
4.2.2.1 Data Cleaning	70
4.2.2.2 Data Transformation	73
4.2.2.3 Outlier Detection and Handling	74
4.2.2.4 Raw Data and Cleaned Data	76
4.2.3 Features Selection using Particle Swarm Optimization	76
4.2.4 Data Splitting	84
4.2.5 Splitting, Training and Testing the Selected Features	85
4.2.6 Evaluation	93
4.2.6.1 Evaluation of Features Selection using PSO	93
4.2.6.2 PSO Hyperparameter Tuning Experiment	98
4.2.6.3 Evaluation Results Training and Testing Split Experiments	101 101
4.2.7 Condominium Price Prediction Prototype	105
4.3 Functionality Testing	106
4.4 Knowledge Acquisition	106
4.5 Discussion	107
4.6 Conclusion	107
