ACKNOWLEDGEMENTS

To complete this thesis, I am asking help from lots of people around me especially my advisor, Madam Flicia Rimin. I would like to thank her because of her guidance and continuous support, I can complete my thesis. I know every mistake that I have made along this study and she always there to correct me. Without support and priceless, I would have face lot of unsettled problem and it affecting my study. Thanks to her and may god bless her.

Besides, I would like to give appreciation to my family. Thank you to my greatest father and my mother, who always give support in my study and willing to lend money for me to accomplish my study. I would like to dedicate this study to them with hope that they will feel proud and satisfy with result of my study.

I realize that many people involve and gave some help to make this study accomplish especially my friends. We always exchange our knowledge and opinion so that our thesis can be as perfect as it can. Without them, it will be hard for me to finish this thesis.

Lastly, I would like to thank Assoc. Prof Dr. Imbarine Bujang for the knowledge that he has given me during my subject which is MGT 646, Quantitative Research Methods. Without him, it will be more difficult for me to accomplish this study. With all of the knowledge and encouragement that he gave during class makes me feel excited and interested to learn more in research area.

ABSTRACT

This study has been conducted to determine the performance of the stock prices and its significant relationship. This study also to see the performance of industrials' stock prices by applying the moving average. The study was conducted within Malaysia. 10 companies selected from 2 industries that is manufacturing and tourism. These two industries are the contributor to the economy with the rank of second and third. The data collected based on daily basis which is for 50-day of period. The beginning date of the data is from 11 August 2017 until 30 September 2017. The chosen of the period of time is based on the recent issue on falling Ringgit Malaysia. The selection of the companies is based on its market capitalization rank and this call as systematic samples which means only top five companies are selected from each industry. Besides market capitalization, interest rates and exchange rates are the variables that been tested for the study. After few tests have been run, the data shows there is significant relationship between the market capitalization of manufacturing and its stock prices but not for the other two. While for tourism, all variables are not significant. The performance of the industries will be analyze by referring to the stock price chart and EMA line.
