ACKNOWLEDGEMENT

This report is successfully developed with the help and support from various dedicated parties and sources. I would like to take the time to express my gratitude towards these important parties who have given me the help and moral support to complete this report.

First and foremost, I would like to express my gratefulness to my advisor, Mr Cyril Supain for his exemplary guidance, monitoring and constant encouragement throughout this research. His wisdom has been the utmost moral support source that kept me going with all the knowledge I have gained. The blessing, help and guidance given by him enables me to complete my research. I would like to thank him for all his time, patience and effort in order to guide me.

Not to forget my second advisor, Mr Franklin H. Lai who have also provided me their highest understanding, encouragement and personal attention which include valuable advice and alteration towards my research. I am truly thankful for this as some of the procedure while completing this research I had to self-taught and refresh all the previous lessons I had which required time and patience.

I would also like to extend my gratitude to all the respondents who have took their time to answer my online questionnaire. Without their participation in the survey, I would never be able to collect the data needed for this research. Their assistance is important which leads to the success of this research study.

ABSTRACT

As the development of technology arises throughout the years, it has seemed to be causing both positive and negative effects and changed the environment greatly. Although technology has provided the convenience and efficiency, people should have the right mindset in making sure to protect the environment as well as maintaining its sustainability. Hence, the aim of this study is to examine the factors which influence the consumers' green purchase intention towards eco-friendly shopping bags in Kota Kinabalu, Sabah. There are three independent variables were used in this research project to identify the factors that influence working consumers' green purchase intention towards eco-friendly shopping bags; environmental concern, environmental knowledge and social influence.

One hundred and twenty working consumers are the sole targeted respondents in this study. It is found that all independent variables have a significant relationship with dependent variables. This research finding have seemed to provide some insight and feedback to marketers who has been facing numerous obstacles and challenges in closing sales with consumers to purchase eco-friendly products, especially biodegradable plastic bags because of the price itself to be more expensive than the conventional plastic bags. In order to successfully refine and redefine a new target market, marketers need to fully understand how these environmental factors have affected consumers' green purchase intention. If they are able to gather as much necessary information, marketers would then be able to develop their new strategy in making sure that attracting consumers to purchase eco-friendly products to be more effective.
