BACHELOR OF BUSINESS ADMINISTRATION WITH
HONOURS (FINANCE) FACULTY OF BUSINESS
MANAGEMENT UNIVERSITI TEKNOLOGI MARA KOTA
KINABALU, SABAH

DECEMBER 2019

ACKNOWLEDGEMENT

I would like to express my highest gratitude to Allah S.W.T the Almighty for His opportunity and His guidance for me to keep up my spirit and healthy throughout doing this research.

My deepest appreciation and honor I present to my helpful advisor, Pn Anastasiah binti Harbi for her non-ending teaching and her ultimate patience throughout the process of completing this final research which contribute me to complete this final report as scheduled.

I also would like to thank my peers that help me through my journey in completing this final research and sharing knowledge and advices to me.

Last but not least, biggest recognition to my family that gives me support and advices throughout my journey not only financially but also emotionally in completing this research.

4.8 Conclusion	42

ABSTRACT

The present study investigates the bank-specific and macroeconomic as a determinants of bank profitability. The motive of this paper is to identify the bank performance from the bank-specific and macroeconomics factors whereas indicates their profitability in financial institution which is banking sector that listed in Bursa Malaysia. The internal factors that will affect the generated profits which is bank size and capital adequacy while external factors is inflation rate and GDP growth rate that represent the economic condition. The objective of this study is to examine the relationship between the bank size, capital adequacy, GDP growth rate and inflation rate towards the return on asset of the bank that listed in Bursa Malaysia. The stata panel data was employed to test the result. The empirical finding have found that GDP growth rate has a positive and significant relationship with return on asset. Apart from that, other variable which is capital adequacy that using equity ratio to measures the financial performance shows a positive correlated but not significant relationship with return on asset in banking sector in Malaysia. However, the bank size that indicates total asset and inflation rate shows a negative and insignificantly relationship with return on asset.
