EXECUTIVE SUMMARY

During the 24 weeks of my internship, I have gained precious and amazing recollections at RB SPECTRA SDN BHD. In this report, I have included the company's information, including its goals, vision, mission, and organizational chart, as well as its products and services offered.

Next, I stated that I was given a job in the Procurement & HR Admin and Electrical & Instrument department in the training reflection. My job experience at the firm has improved me in many areas, including my technical abilities and soft skills since I have finished all of my manager's assigned assignments. In addition, the organization has provided me with both internal and external benefits, including training, experience, and an allowance.

Additionally, the SWOT analysis was utilized in this report to examine the report's present state in terms of internal weaknesses, external opportunities, and external threats. In order to help the organization enhance the business development and performance that are impacted by certain challenges and problems, I have included a SWOT matrix for discussion and recommendations.

In summary, the process of finishing this report has improved my understanding of how RB Spectra Sdn Bhd functions in actual work situations. My mind was awakened to the real work world in the business by all the experiences and information I acquired while working for at RBS. I am hoping that this internship can help me in the future to make it in another field.

RB SPECTRA

Formerly known as Ram-bytes Sdn Bhd

COMPANY PROFILE

RB Spectra was founded in Kerteh, Terengganu, Malaysia in 1998, and specializes in Temporary Living Quarters (A60 DNV-approved Cabin), Electrical & Instrumentation, and Machine Vibration Monitoring Systems. In 2011, RB Spectra opened a new branch office in Miri, Sarawak, as well as a corporate office in Kuala Lumpur.

As a pioneer in the Temporary Living Quarters profession, RB Spectra constructed the A60 cabin on its own and can provide site installation and maintenance services on a supply and base basis. They specialize in the construction of A-60 fire-rated 8-man sleeper cabins for rental and have over 20 units that are ready to use and certified by DNV 2-7-1. They are prepared for any fabrications and customized works, such as Modular Living Quarters/etc., which will be DNV certified.

RB Spectra specializes in electrical power and instrument system engineering, design, installation, commissioning, and maintenance. Offshore platforms, onshore plants (Oil & Gas, Power Plant Industries), and other areas are covered. Since 2001, RB Spectra has provided entire facilities and resources to support the full range of electrical and instrumentation solutions.
