Soil Stabilisation Using Fj-Adtech Method

Rudy Tawie

As part of the MOU agreement between ZECON Engineering Bhd and UiTMCS, a team of lecturers led by Prof. Madya Dr. Azmi Ibrahim visited ZECON's Matang Road Project from 22 to 23 May 2004 to conduct a trial study to investigate the effect of soil stabilisation using a method known as FJ-ADTECH. They were also accompanied by a Technical Sales Representative of MBT (Malaysia) Sdn. Bhd., (the company that supplied the chemical admixture) and a Japanese consultant from MALJAPA Sdn. Bhd.

Since the representative from MBT (Malaysia) Sdn. Bhd. had brought enough admixtures with him, the research team decided to go ahead with the trial implementation the following day. Despite problems with mobilizing the machinery and shortage of manpower (as it was Sunday), the trial project was successfully implemented although the arrangement was made on short notice. Ir. Abang Azahari Osman, General Manager of ZECON said that they are looking forward to working closely with UiTM to further monitor of the performance of the trial project.

Polarization

Polarization refers to the tendency to look at the world in terms of opposites and to describe it in extremes- good or bad, positive or negative, healthy or sick, intelligent or stupid. It is often referred to as the fallacy of "either-or" or "black and white."

Although magnetic poles are either positive or negative and certain people are extremely rich while others are extremely poor, most people are in the middle. Most people exist somewhere between the extremes of good and bad, healthy and sick, intelligent and stupid, rich and poor. Yet we have a strong tendency to view only the extremes and to categorize people, objects, and events in terms of these polar opposites.

We create problems when we use the absolute form in inappropriate situations- for example, "The politician is either for us or against us." These options do not include all possibilities. The politician may be for us in some things and against us in other things, or may be neutral. During the Vietnam War, people were categorized as either hawks or doves, but clearly there were many people who were neither and many who were hawks on certain issues and doves on others.

(From 'Human Communication' written by Joseph A. Devito)

2.5 billion beats!

Each day, a healthy heart beats one hundred thousand times and pumps 4,300 gallons of blood, or 1.5 million gallons a year. Without interruption, it accepts returned spent blood, depleted of oxygen and high in carbon dioxide. On the other hand, it blasts blood into the lungs for a rejuvenating boost of oxygen, takes it back and forces it out on the other side, back into circulation throughout the entire body. The single force of the heart's pumping action

keeps the blood circulating through every tissue of the body, non-stop and throughout an entire lifetime.

Cardiac muscle is an amazing muscle tissue found only in one place - the heart. Unlike other types of muscle, it never rests and never tires, beating at about 72 times a minute, 24 hours a day for as long as you live. The heart pumps blood through 60,000 miles of blood vessels. If you could put all the vessels in a line, they would reach almost three times around the world. At 72 beats a minute, by age 65, your heart will have beaten 2.5 billion times!

Bengkel Program MBA - m.s. 7

Tahniah!

kepada semua pelajar yang berjaya dalam peperiksaan semester lepas.

Syabas!

kepada mereka yang dipilih untuk meneruskan pengajian mereka dalam program ijazah sarjana muda di UiTM.

Selamat Datang!

diucapkan kepada para pelajar baru

Retreat Kualiti 2005 - m.s. 5
