ABSTRACT:

As technology goes broader and wider, the world around evolves. Same goes to the library and the information center. In the future, we construct a planning which refers as digital library. The plan design which the library become a place which do not use papers or called as paperless. And as for replacements, data across books and other source of information are reserved in a machine which called as the Instant Book. This machine is constructed and has various courses of learning within and it contains the information and books related to the field of studies. The format of lending books has changed into a USB type of format which you can lend books within the machine. The USB is provided by the library and it has a protocol in lending. Also, the USB has a high-end security system which the information that have been withdraw to the USB cannot be duplicate neither stolen as the USB is formatted to erase memories to a certain time-spent. It clears the information inside the USB which if the USB is brought outside the library it will self-vanish by the system of the USB. The USB that has been lend from the library has to be returned in the amount of time that has been requested. The machine also doesn't accept any other USB but rather the USB provided by the library itself.

Keyword: Digital Library, Lending books, Technology

Novelty & Uniqueness:

Platform for more integrated usage of efficiency. Access to multiple content of resources.

Potential Commercialization:

Academic Library, student, researcher.

Acknowledgement:

A big thankful to our lecturer that help us and guide us in this project.
