Acknowledgement

Firstly, we were thankful to Allah S.W.T, the most gracious and the most merciful, because of His blessing and mercy and for giving us healthy physical and mental to finish our research. Under the guidance of our advisor, Madam Rosilawati Binti Sultan Mohideen, who is so generous in lending her hand and knowledge for assisting us and also his commitment in progress to accomplish this research. Thanks a lot for all kindness you have shown madam. Special thanks to co-supervisor, Sir Mohd Nazim Bin Ganti Shaari for his guidance to complete this research.

We also want to express our appreciation to all lecturers in Faculty of Administrative Science & Policy Studies who always give us support and helps either direct or indirectly during the implementation of this final research and during our three years study in UiTM.

Last but not least, we would like to convey our special gratitude to our beloved family who give us strength to keep up with the study and encourage us in the process of succeeding this project paper. Also thanks to other individuals who have involved either directly or indirectly in this final research.

Thank you very much.

Universiti Teknologi Mara, Bandaraya Melaka.

ABSTRACT

The study seeks to determine the factors that influence oral health problems. A sample 357 of public at Urban Transformational Centre, Melaka (UTC, Melaka) district had been selected for this study. The findings showed that the independent variables or factors that support the researchers' hypothesis are knowledge on oral care, practices of oral care, and attitude toward oral care. All the three factors determine their relationship with the factors that influence oral health problems among public at UTC, Melaka. Convenient sampling technique will be used in order to distribute the questionnaires to selected respondents. Based on the finding, practices of oral care are the most contributors to the factors that influence oral health problems. While, all the three factors (knowledge on oral care, practices of oral care, and attitude toward oral care) have a significant relationship with the oral health problems. This is due to the result of correlation coefficient that has been used. In conclusion the study has been successfully implemented and shows that three factors has a relationship with oral health problems.
