ABSTRACT

As time goes by, the technology also raise rapidly. Therefore, there are many new applications and technology exist especially things that relate to education. Unfortunately, schools are lag behind as there are still implementing the use of textbooks and blackboards on a daily basis. Computer, for example is being used widely as integrated learning technologies because it is believed can open up vast amounts of resources for student. (Duffin and Mac Rorie, 1998) Meanwhile the implementation of interactive multimedia allows the contents to be presented in a nonlinear way in which user involve actively in each learning session. This project is focusing on learning al-Quran through iqra' method. For simple explanation, it is about to implement iqra' method with constructivism through CORE approach. It is to create a learner centered environment among students. However, after research has been done, the researcher found that iqra' can be implemented using CORE approach. It is because, with all the element in learning iqra' using iqra' can be delivered successfully.
