ABSTRACT

The present study examines the determinants of loan loss provisions with the presence of earnings management and capital management by commercial banks in the emerging and developed markets during the period of 2004 to 2012. Besides the main objective, there are external factors as well as the internal factors investigated in determining the loan loss provisions. This study focuses on the banking sectors that specify the commercial banks for the period of 2004 to 2012 in selected emerging and developed markets. In order to achieve the objectives of this study, Malaysia and Thailand are chosen to represent the emerging markets, while the developed markets are represented by Hong Kong and Japan. The empirical findings based on Pooled Ordinary Least Square (Pooled OLS) with Newey-West Standard Error for emerging markets and Fixed Effects (FE) with heteroscedasticity and autocorrelation for developed markets recommend that earnings management, gross domestic product and certain bank internal factors have a statistically significant impact on loan loss provisions. This study found that the proxy of earnings management, earnings before tax and provisions is positively related to loan loss provisions in both economies. Surprisingly, the variable of capital management is found to be insignificant in emerging market economies and positively associated with LLP in developed markets. Based on the empirical findings of GDP implying that during the period of study, the economic expansion does influence the decision of loan loss provision by following the normal pattern of business cycle for both markets and contributes to the procyclicality behaviour of loan loss provisions. With respect to the effect of bank specific factors on the loan loss provisions of emerging and developed markets, it clearly indicates from the overall perspective of the results, that the obvious factors that have really contributed to loan loss provisioning practice of both markets are only the non-performing loan and the return on assets. Meanwhile, the robustness check using Generalized Method of Moments (GMM) has basically generated the same results as Fixed Effects with heteroscedasticity and autocorrelation for developed markets.

ACKNOWLEDGEMENT

Firstly, I would like to say Alhamdulillah, all praises to Allah (swt) for giving me the strength and opportunity to accomplish this challenging journey successfully. Special appreciation goes to my supervisors, Prof. Dr. Ismail Ahmad and Assoc. Prof. Dr. Imbarine Bujang for the support and guidance. Their invaluable assistance of constructive comments and suggestions throughout this painful process has contributed to the completion of the thesis. Not forgetting, I would like to extend my gratitude to the Head of Postgraduate and Professional Studies, Faculty of Business Management, Dr. Abdul Kadir Othman and the staffs for providing the facilities and knowledge. I would also like to express my sincere thanks to the Dean and team from the Arshad Ayub Graduate Business School (AAGBS) for their support and help towards my postgraduate affairs previously.

My special thanks to the instructors of the methodology courses Prof. Dr. Fadzlan Sufian, Dr. Baharom, Dr. Law and the assistance during the course. My sincere thanks also go to all my dear friends for their kindness and moral support throughout this journey. Thanks for the friendship and memories that we have created together.

Last but not least, my deepest gratitude goes to my beloved husband, Mr. Khairi Khalid, my daughter and son, Hanis Khairina and Ammar Khalish respectively for their endless love, prayers and encouragement. My special thanks to my mother, father and family members for their love and support during the entire study period. Lastly, I would like to thank to those who have indirectly contributed to the completion of this thesis. Thank you very much. May Allah (swt) bless all of us.
