ACKNOWLEDGEMENT

Allahamdullillah, grateful thanks to Allah S.W.T for giving me health and strength to complete this research. I've been supported and encourage in writing this research by many people. First and foremost are the members of my family, all whom sacrifices much to assist me. I thank them for all the timer help, but more importantly for their understanding.

First, I owe mush to my advisor, Datuk Professor Dr Haji Mohd Tahir bin Abdul Hamid, whose influence left an indelible mark on me and this research, also his insight with me over this semester and whose influence on my ideas has been significant.

I also would like to honor my second examiner, Cik Nurzehan, and special thanks to all the staff of Bank Rakyat Jasin for their generous cooperation and assistance in conducting this research.

Finally, I am grateful to all my friends over the past 2 years who, in the course of discussion had me given ideas and helped me to understand points that had baffled or irritated me. I extend the hope that the material presented will seem exciting and interesting as it has seemed to me.

Thank you very much.

ABSTRACT

The purpose of this research was to enhance our understanding on several selected dimensions that influence the acceptance of services through the corporate social responsibilities provided by Bank Rakyat Jasin. The model investigated three major variables that may influence the acceptance of Bank Rakyat services which were CSR activities, product and services, and employee's skill and behavior. The results show that these three variables are able to explain the acceptance of Bank Rakyat services.

The findings showed that most of the customers were accept the services through the CSR activities in achieving social or environmental outcomes when there is a direct link to profit which we can the increasing of the profits and also the increasing numbers of the account holder for 3 years. This approach to CSR requires that the resources applied to CSR activities must have at least as good a return as that these resources could generate if applied anywhere else. This analysis drastically narrows the possible scope of CSR activities.

In this study, we used interviews and questionnaire techniques for data collection. Based on frequency table including means, mode and standard deviations, a clear findings and result is observed.
