**Thesis Submitted in Partial Fulfillment of the Requirement for the Degree of Bachelor of Science (Honors) Bio-Composite Technology in the Faculty of Applied Sciences
Universiti Teknologi MARA**

January 2015

CANDIDATE'S DECLARATION

I declare that the work in this thesis was carried out in accordance with the regulations of Universiti Teknologi MARA. It is original and the result of my own work, unless otherwise indicated or acknowledged as referenced work. This thesis has not been submitted to any other academic institution or non-academic institution for any other degree or qualification.

In the event that my thesis be found to violate the conditions mentioned above, I voluntarily waive the right of conferment of my degree and agree to be subjected to disciplinary rules and regulation of Universiti Teknologi MARA.

Name of Candidates : Wan Hazwani Binti Wan Hassan
Candidate's ID No. : 2011306669
Programme : Bachelor of Science (Hons.) Bio-Composite
Technology
Faculty : Applied Science
Thesis Title : Properties of Hybrid Particleboard from *Acacia mangium* and Petai belalang using Phenol formaldehyde resin.

Signature of Candidate : 

Date : 12 JANUARY 2015

PROPERTIES OF HYBRID PARTICLEBOARD FROM ACACIA MANGIUM AND PETAI BELALANG USING PHENOL FORMALDEHYDE RESIN

By

January 2015

ABSTRACT

This study was carried out to investigate the properties of hybrid particleboard from *Acacia mangium* and Petai belalang using Phenol formaldehyde resins. The particleboard was produce from two types of species which are *Acacia mangium* and Petai belalang (*Leucaena leucocephala*) with different resin content (7%, 9%, and 11%) and the ratio of the percent wood species (100, 60:40, 50:50, and 40:60 %). The experimental particleboards were tested under two different testing conditions which are mechanical testing (MOR, MOE and IB) and physical testing (TS and WA) in accordance Japanese Industrial Standard (JIS A 5908:2003). In this study, the results showed, for the ratio of the percent wood species, there were significant interactions which had impact on all board properties and for different resin percentage only had significant effect on thickness swelling. Particleboard from 100% *Acacia* shows the highest value of MOR, MOE and IB compared with other boards. The physical properties of 100% *Acacia* had the best TS and WA. In conclusion, the properties from the particleboard made of 100% *Acacia* passed all the requirement of JIS A 5908:2003.
