## ABSTRACT

This study provides empirical evidence on the effects of unexpected dividend changes (UDC) on stock returns with respect to Malaysian economic conditions namely: (1) before the Asian financial crisis (1990-1996); (2) during the Asian financial crisis (1997-1998); (3) after the Asian financial crisis (1999-2007); (4) during the global financial crisis (2008-2010); and for the (5) overall period (1990-2010). The purpose of this study is to identify the exact economic conditions that stimulate investors' reactions to changes in dividends and consequently to the stock price movements. Below and Johnson (1996) found that market reactions to dividend changes varies with respect to bullish and bearish markets respectively. The present study therefore believes the dividend signalling effects varies according to economic conditions. This study made 861 observations which consist of 264 dividend increases, 175 dividend decreases and 422 dividend of no-change for the overall period. The findings of the panel data approach reveals that the unexpected dividend changes are positive and significantly correlated with cumulative abnormal returns in the overall period (1990-2010), during the Asian financial crisis (1997-1998) and after the Asian financial crisis (199-2007). Overall findings constitute support on the dividend signalling theory where an unexpected increase (decrease) in dividends send good (bad) signals to investors leading stock prices to increase (decrease). On the other hand, a cross sectional approach offers similar results only in the period before the Asian financial crisis (1990-1996) and during the Asian financial crisis (1997-1998).

## ACKNOWLEDGEMENT

There are many people I have to thank for giving me the opportunity, support and guidance to complete this thesis.

At the top of the list, Dr Imbarine Bujang, my main supervisor, who always keeps me centred and focused on the development and completion of this thesis. Thank you.

My parents, Haji Harbi Bin Abdul Majid and
and family members for their endless love and support. Thank you.

Ahmad Suzaini Hashim and Sharifah Marmin, Staff of Knowledge Centre of Bursa Malaysia, who have assisted me in data collection. Thank you.

Taufik Abdul Hakim, a friend, who has helped me in data analysis. Thank you.

Ivan Rodrigo (Executive Director of Cambridge English School) for proofreading my thesis. Thank you.

Flicia Rimin and Nurashakin Zakaria for being my best friends. Thank you.

## TABLE OF CONTENTS

**CHAPTER THREE: DATA AND METHODOLOGY**

3.1 Overview of chapter 29
3.2 Scope of Study 29
3.3 Empirical Models
3.3.1 Based on Cross-Sectional Analysis on Cumulative Abnormal Returns 31
3.3.2 Based on Panel Data Analysis on Cumulative Abnormal Returns 31
3.4 Measurement of Variables
3.4.1 Measurement of Independent Variable
3.4.1.1 Unexpected Dividend Changes 32
3.4.2 Measurement of Dependent Variable
3.4.2.1 Stock Returns 33
3.5 Hypothesis Testing 36
3.6 Estimation Methods
3.6.1 Cross-Sectional Approach 40
3.6.2 Panel Data Approach 40
3.6.3 Panel Unit Root Test
3.6.3.1 LLC Test 41
3.6.3.2 IPS Test 41
3.6.4 Estimation Procedure for Panel Data Approach
3.6.4.1 Breusch Pagan LM Test 42
3.6.4.2 Hausman Specification Test 43
3.6.5 Panel Data Models
3.6.5.1 Fixed Effects Model (FEM) 44
3.6.5.2 Random Effects Model (REM) 44
