**MONITORING AND ANALYSIS PART OF RIVER
BANK USING UNMANNED AERIAL VEHICLE
(UAV) AT TERUSAN BESAR, JITRA**

MOHAMAD AMIN BIN MOHD ASLI

Thesis submitted in fulfillment
of the requirements for the degree of
Bachelor Science of Geomatics (Hons)

Faculty of Architecture, Planning and Surveying

July 2017

AUTHOR'S DECLARATION

I declare that the work in this thesis/dissertation was carried out in accordance with the regulations of Universiti Teknologi MARA. It is original and is the results of my own work, unless otherwise indicated or acknowledged as referenced work. This thesis has not been submitted to any other academic institution or non-academic institution for any degree or qualification.

I, hereby, acknowledge that I have been supplied with the Academic Rules and Regulations for Post Graduate, Universiti Teknologi MARA, regulating the conduct of my study and research.

Name of Student : Mohamad Amin Bin Mohd Asli
Student I.D. No. : 2014576837
Programme : Bachelor in Surveying Science and Geomatics (Hons)
Faculty : Architecture, Planning & Surveying
Thesis/Dissertation Title : Monitoring and Analysis of River Bank Using Unmanned Aerial Vehicle (UAV).

Signature of Student : 

Date : July 2017

ABSTRACT

The unmanned aerial vehicle today not just as hobby but for mapping with the photogrammetry concept, combining aerial photo and aerial mapping. The ability of UAV is to capture the aerial image with the information of the ground control point that can be produce in elevation model. The purpose of this thesis was to produce the Digital Surface Model and Digital Terrain Model of the study area with the aim to apply photogrammetry concept in aerial mapping using unmanned aerial vehicle for the river bank in Digital Surface Model and Digital Terrain Model at Kampong Lubuk Batu, Kedah. The objective of this thesis consist with three which is producing DSM and DTM, generating river bank profile and to evaluate of the two source of data. The methodology consist with the data was achieved by processing using the software. Flight control algorithms to guide a vehicle through waypoint based flight paths and loiter about a point were implemented using direction fields. The result will show the changes of the river bank between the current and previous image captured data in 2015

TABLE OF CONTENTS

CONFIRMATION BY PANEL EXAMINERS	ii
AUTHOR'S DECLARATION	iii
ABSTRACT	iv
ACKNOWLEDGEMENT	v
TABLE OF CONTENTS	vi
LIST OF TABLES	vii
LIST OF FIGURES	viii
LIST OF ABBREVIATIONS / NOMENCLATURE	xi
CHAPTER 1 : INTRODUCTION	
1.1 Introduction	1
1.2 Problem Statement	2
1.3 Aim & Objectives	3
1.4 Research Question	4
1.5 Methodology	5
1.6 Expected Outcome	7
1.7 Significant of Study	8
1.8 Structure of Thesis	8
1.9 Summary	9
CHAPTER 2 : LITERATURE REVIEW	
2.1 Introduction	10
2.2 Concept of Photogrammetry	11
2.3 Concept of UAV in Photogrammetry	14
2.4 Digital Surface Model	17
2.5 Digital Terrain Model	18
2.6 The Monitoring of River Bank	19
2.7 Pix4d Software	20
2.8 Global Mapper 18	24
2.9 Summary	25

CHAPTER 3 : METHODOLOGY

3.1	Introduction	26
3.2	Planning and Reconnaissance	27
3.3	The Equipment and Facilities	29
3.4	Data Acquisition	31
3.5	Data Processing	35
3.6	Data Analysis	46
3.7	Summary	47

CHAPTER 4 : RESULT AND ANALYSIS

4.1	Introduction	48
4.2	Observation Values and Jupem Values	49
4.3	Ground Control Points	51
4.4	Orthophoto	53
4.5	Verification Point	54
4.6	Digital Surface Model	58
4.7	Digital Terrain Model	60
4.8	River Bank Profile	62
4.9	Comparison Of Current and Previous Data	64
4.10	Summary	68

CHAPTER 5 : CONCLUSION AND RECOMMEDATIONS

5.1	Introduction	69
5.2	Conclusion	69
5.3	Recommedations	70
