## Abstract

The purpose of this study is to determine the factors that contribute into students' entrepreneurial attitudes and identify lecturers' perceptions regarding students with entrepreneurial attitudes. This paper seeks for a better understanding on how students having entrepreneurial attitudes affect the lecturers' perception. A collection of secondary data was used for analyzation of results, regarding students' entrepreneurial attitudes and how it reflects the perception from lecturers. Factors like demographic characteristics, previous entrepreneurial experiences and entrepreneurship education are commonly influenced students behaviour to venture in entrepreneurship. Through the compare and contrast of data gained, the research results showed that demographic characteristics in term of family background are not highly affected student's attitude whereas previous entrepreneurial experiences and entrepreneurship education do affect student's attitude towards entrepreneurship. As for lecturer's perception, they give positive perception on students' entrepreneur. This is because the lecturers believed that the students able to help themselves to be job creators instead of job seekers in the future. Although students who get involved with entrepreneurship while studying can give negative effects to their academic performance, students can prevent it by dividing their time equally between working and studying.

## Acknowledgements

First of all we would like to thank our very merciful god, ALLAH S.W.T. for His blessing and grace. It is with His blessing that the research, *Lecturers' Perception toward Students Entrepreneurial Attitudes* is completed on time. We hope that this research will provide valuable information to individuals and organization alike.

We would like to express the deepest appreciation to our supervisor, Sir Mohd Azuan bin Mohd Alias for his supportive advice, patience and giving the ideas throughout this research. He has successfully guided us even through some stressful times and has sharpened our understanding of a thesis and academic writing. Without his guidance and encouragement, this study could not be possible.

In addition, special thanks dedicated to all those who have directly and indirectly guided us in completing the research. Many people, especially our classmates who have made valuable comments and suggestions on this study which gave us an inspiration to improve our research.

Finally and most importantly, we would like to pay tribute to our parents and immediate family members for their continuous support and understanding in shaping our educational goal throughout the process of completing this research. Your overwhelming patience, support, love, encouragement, and inspiration are incalculable.
