## **ABSTRACT**

*A simulation study on the thermal performance has been done on tropical institutional building at Shah Alam. The Energy-10 software was used for this purpose and the building chosen was the medium sized Faculty of Information Technology and Quantitative Science building at Universiti Teknologi MARA.*

*The main objectives of the project were to study the energy consumption, to analyze the possible energy saving by redesigning the building parameters and to make recommendations on the possible energy efficient designed strategies.*

*Eight cases were studied, including the reference case where existing building parameters were considered. It was found that a minimum of 10% of the total annual energy consumption could be saved by applying some energy efficient strategies while a maximum saving of 70% could be produced if all the design strategies including daylighting in the software were considered.*

*The capabilities and limitations of the software are discussed. Suggestions for improvement of the software and recommendations for energy efficient building design in a tropical setting are also included in this report.*

## TABLE OF CONTENTS

<u>CONTENTS</u>	<u>PAGE</u>
ACKNOWLEDGEMENT	I
ABSTRACT	II
TABLE OF CONTENTS	

### CHAPTER ONE

1 INTRODUCTION	1
1.1 DEFINITION	2
1.1.1 Energy-efficient strategy	2
1.1.2 Daylighting	3
1.1.3 HVAC System	3
1.1.4 Materials	4
1.1.5 Lighting	5
1.1.6 Shading	5
1.2 DESIGN AND ANALYSIS TOOL	6
1.2.1 Energy-10	6
1.3 OBJECTIVES	7
1.3.1 To study the Energy-10 software	7
1.3.2 To study energy consumption of present building	7
1.3.3 To redesign existing institutional building for low energy building using Energy-10 software	7
1.3.4 To analyze the possible energy savings in building	8
1.3.5 To recommend the design parameters for energy efficient building	8
1.4 SUMMARY	8

### CHAPTER TWO

2 THEORY, EQUATIONS AND CALCULATION	10
2.1 FUNDAMENTALS OF HUMAN COMFORT-Definitions	10
2.1.1 Temperatures	10
2.1.2 Conduction, Convection and Radiation	10
2.1.3 Air Volume and Movement	11
2.1.4 Activity and Clothing	12
2.1.5 Air Purity	12
2.1.6 Humidity	12
2.1.7 Ionization	12
2.2 SOLAR RADIATION IN MALAYSIA	13
2.3 LOAD SOURCES	13
2.3.1 Sensible	13
2.3.2 Latent	14
2.3.3 Steam Loads	14
2.3.4 Internal Loads	15
2.4 HEAT GAINS	15
2.5 COOLING LOAD	16
2.6 EQUATIONS FOR BUILDING MATERIALS CALCULATION	19

<b><u>CONTENTS</u></b>	<b><u>PAGE</u></b>
2.6.1 Unit for Heat Flow	19
2.6.2 Heat Loss	20
2.6.3 Heat Gain	22
2.6.4 Infiltration	23
2.7 SAMPLE OF CALCULATION	24

### **CHAPTER THREE**

3 INTRODUCTION	29
3.1 ENERGY EFFICIENT STRATEGIES	30
3.1.1 Daylighting	30
3.1.2 Glazing	31
3.1.3 Shading	32
3.1.4 Energy Efficient Lighting	33
3.1.5 Lighting Control	34
3.1.6 Insulation	35
3.1.7 Air Leakage Control	36
3.1.8 Thermal Mass	36
3.1.9 Passive Solar Heating	37
3.1.10 Natural Ventilation	38
3.1.11 Economizer Cycle	38
3.1.12 Exhaust Air Heat Recovery	40
3.1.13 High Efficiency HVAC	40
3.1.14 HVAC Control	41
3.1.15 Evaporative Cooling	41
3.1.16 Solar Hot Water Heating	42
3.2 ENERGY-10	43
3.2.1 Autobuild	44
3.2.2 Reference Case	45
3.2.3 Low-Energy Case	45
3.2.4 Apply	46
3.2.5 Rank	46
3.2.6 Using Energy-10 to incorporate the Energy Efficient Strategies	47
3.2.7 Steps to use Apply Features	47
3.2.8 Steps to use Rank Features	48
3.2.9 Steps to Customize Apply and Rank Actions	48
3.3 FTMSK BUILDING	50
3.3.1 Computer Lab Parameters and Materials	50
3.3.2 Lecturer's office Parameters and Materials	53

### **CHAPTER FOUR**

4 METHODOLOGY	58
4.1 PRIMARY METHODOLOGY	59
4.1.1 Study of Energy-10 Software	61
4.1.2 Interviews Authorities	62

## **CONTENTS**

## **PAGE**

4.1.3	Data and Information Research	62
4.1.4	Data and Information Input	63
4.1.5	Downloading Weather Data	63
4.1.6	Simulation	64
4.1.7	Analyzing the Results	66
4.2	DESIGN METHODOLOGY	67
4.2.1	Pre-Design Process	69
4.2.2	Elimination Parametric	69

## **CHAPTER FIVE**

5	RESULT AND ANALYSIS	71
5.1	CASE 1 – CALCULATION ANALYSIS	74
5.2	CASE 2 – CALCULATION ANALYSIS	77
5.3	CASE 3 – CALCULATION ANALYSIS	80
5.4	CASE 4 – CALCULATION ANALYSIS	83
5.5	REDESIGN 1 – CALCULATION ANALYSIS	86
5.6	REDESIGN 2 – CALCULATION ANALYSIS	89
5.7	REDESIGN 3 – CALCULATION ANALYSIS	92
5.8	REDESIGN 4 – CALCULATION ANALYSIS	95
5.9	KEEP RESULT ANALYSIS CALCULATION	101

## **CHAPTER SIX**

6	DISCUSSION AND CONCLUSION	105
6.1	DISCUSSION	106
6.2	ENERGY-10 CAPABILITIES AND LIMITATIONS	108
6.2.1	Energy-10 Capabilities	108
6.2.2	Energy-10 Limitations	109
6.3	SUGGESTIONS AND RECOMMENDATIONS	110
6.4	CONCLUSIONS	111
